The WebWorks ePublisher Platform Documentation

The WebWorks ePublisher Platform provides many resources to help you use the product components to deliver integrated, single-sourced information solutions:

Evaluation Guide

Provides general information about the product and guides you through the trial and evaluation process.

Design Guide

Provides strategy and best practice information for designing and deploying standardized Stationery for information development teams to use. This book defines terminology and provides the concepts and procedures you need to achieve the look and feel you want for your information deliverables. This book also outlines how to automate the publication process.

Writer Guide

Provides the information you need when developing content to publish. This book provides the concepts and procedures you need to create the source files and then publish those files using a defined Stationery.

Help

Provides context-sensitive information and step-by-step guidance for common tasks, as well as descriptions of each field on each window. The Help provides a comprehensive, integrated deliverable that includes all the information from the books. To display the Help, click **Content** on the **Help** menu in the console.

docs.webworks.com Wiki

Provides a comprehensive Wiki that delivers all the product documentation content in Wiki form, where it can be extended and enhanced by the ePublisher community.

Web Support

Provides additional solutions and information, such as tutorials, demos, Knowledge Base articles, and the WebWorks Wiki. You can access these resources at www.webworks.com/Support.

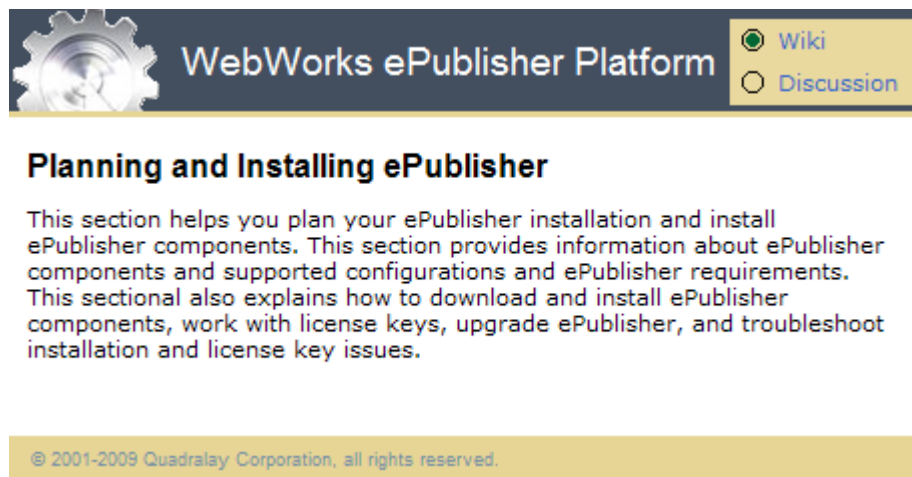

Understanding ePublisher Online Help and WebWorks Documentation Wiki Integration

The ePublisher product team produces the ePublisher online help system as a part of their product development and release process. The ePublisher online help system contains the latest information about the product available at the time of release. ePublisher installs the ePublisher online help system locally on user computers when users install ePublisher.

The ePublisher product team also publishes the same content used in the ePublisher online help system to the docs.webworks.com documentation Wiki. This integration provides the following benefits:

- WebWorks employees, partners, and customers can add comments, edits, and content to the ePublisher topics on the docs.webworks.com Wiki in real time, improving, enhancing, and extending the ePublisher documentation as needed instantaneously.
- ePublisher users with an Internet connection who view the ePublisher online help system installed on their computers can quickly see the following information:
 - If a page they are viewing in the ePublisher help system on their local computer has been updated on the Wiki
 - If other users have added comments about the page on the Wiki

The following figure shows a page from the ePublisher online help system.

The frame in the upper right corner of each page in the ePublisher online help system contains two links, **Wiki** and **Discussion**. As you click pages in the ePublisher online help system, the frame in the upper right corner of the page communicates with the docs.webworks.com Wiki server. It identifies if ePublisher content providers have edited or added comments to the corresponding page on the docs.webworks.com Wiki server.

Note: If you do not have an Internet connection, the Wiki and Discussion radio buttons are not enabled and you cannot see which pages in your locally installed ePublisher help system have been updated or commented upon on the Wiki. However, you can still access the ePublisher online help system installed on your computer when you installed ePublisher.

Using the Wiki Link in the ePublisher Online Help System

If you have an Internet connection, you can use the **Wiki** link in the ePublisher online help system to obtain additional information about the page you are viewing.

If you have a login on the docs.webworks.com Wiki or the wiki.webworks.com Wiki, you can also add edits or comments to pages on the docs.webworks.com Wiki. The same Wiki login works for both WebWorks Wiki sites. You can obtain a WebWorks Wiki login by sending a request to wikigroup@webworks.com.

The **Wiki** link in the ePublisher online help system works as follows:

- *If the Wiki radio button in the frame displays as enabled*, ePublisher content providers have added edits or content to the corresponding page on the docs.webworks.com Wiki. The following figure shows the frame on a page with the **Wiki** radio button enabled.

When you click on the **Wiki** link in the frame, a new browser window opens that displays the modified page on the docs.webworks.com Wiki. You can see the most up-to-date content for the selected page, including information that helps you see precisely which lines and words on the page changed. You can also add your own edits and comments to the topic by clicking the **Edit** or **Discussion** link on the Wiki page.

- *If the Wiki radio button does not display as enabled*, ePublisher content providers have not added edits or content to the corresponding page on the docs.webworks.com Wiki. However, if you would like to add a comment or edit to the page, click the **Wiki** link. A new browser window opens that displays the corresponding page on the docs.webworks.com Wiki. You can click the **Edit** link to edit the page on the Wiki or the **Discussion** link to add a comment about the content on the Wiki.

Using the Discussion Link in the ePublisher Online Help System

You can use the **Discussion** link in the ePublisher online help system to see comments users have made about a page or to add your own comments to the page. The **Discussion** link works as follows:

- *If the Discussion radio button in the frame displays as enabled*, ePublisher content providers have added comments about the content to the corresponding page on the docs.webworks.com Wiki. The following figure shows the frame on a page with the **Discussion** radio button enabled.

When you click on the **Discussion** link in the frame, a new browser window opens that display the Discussion page for the corresponding topic on the Wiki. You can review the comments other users have added. You can also add your own edits or comments by clicking the **Edit** link to edit the page on the Wiki or the **Discussion** link to add a comment about the content on the Wiki.

- *If the Discussion radio button does not display as enabled*, ePublisher content providers have not added comments about the topic on the docs.webworks.com Wiki. However, if you would like to add comments to the topic, first make sure that you have previously logged into the Wiki using your browser, then click on the **Discussion** link in the frame. A new browser window opens, and you can type in your comments on the comment page for the topic on the Wiki.

For more information about how the ePublisher product team integrates the ePublisher online help system and the docs.webworks.com Wiki, see the *ePublisher Design Guide*.

Contacting Quadralay

Please contact us with your questions and comments. We look forward to hearing from you. If you need assistance with an issue, please contact Technical Support. The Support Web site allows you to review the support policy and create a case to track an issue.

Conventions

The WebWorks ePublisher Platform documentation uses consistent conventions to help you identify items. The following table summarizes these conventions.

Convention	Use
Bold	<ul style="list-style-type: none"> Window and menu items Technical terms, when introduced
<i>Italics</i>	<ul style="list-style-type: none"> Book titles Variable names Emphasized words
Fixed Font	<ul style="list-style-type: none"> File and folder names Commands and code examples Text you must type Text (output) displayed in the command-line interface
Blue	<ul style="list-style-type: none"> Links
>	<ul style="list-style-type: none"> Submenu selections, such as Generate Reports > All
Brackets, such as [value]	<ul style="list-style-type: none"> Optional parameters of a command
Braces, such as {value}	<ul style="list-style-type: none"> Required parameters of a command
Logical OR, such as value1 value2	<ul style="list-style-type: none"> Exclusive parameters. Choose one parameter.

Introduction to the WebWorks ePublisher Platform

Content development, publication, and maintenance are complex, time-consuming processes. Each day, companies spend numerous hours writing, formatting, and publishing information needed by internal and external users. At the same time, these users search among vast amounts of content to find the information they want and need. Companies need to streamline content production processes while delivering the content to users when, where, and how they need it.

Adding to this complexity, teams across the company use multiple content authoring tools, such as Adobe FrameMaker, Microsoft Word, and XML editors, to create the content. These teams must be able to use the authoring tools that best meet their needs. However, mastering these tools for content development is only half the battle. Content developers also need tools to publish content consistently in multiple formats, such as print, HTML, and PDF. This requirement is difficult to meet and often leads to increased production costs or an inconsistent corporate image. In addition, corporate branding standards change over time, and implementing these changes across all content adds to production and maintenance costs.

With all these variations in content creation, publication, and maintenance, delivering the right information to the right people in the right format and at the right time is an endless and costly struggle that consumes enormous time and resources across organizations.

What Is ePublisher?

The WebWorks ePublisher Platform (ePublisher) is a powerful, comprehensive solution that delivers cost-effective processes for efficiently publishing and maintaining online and print information. ePublisher gives you the flexibility to deliver content from multiple types of source documents, such as Adobe FrameMaker, Microsoft Word, and DITA, in virtually any output format you need without incurring training or software deployment expenses. The open, standards-based architecture provides a powerful engine that does not lock your content in a proprietary format that can become outdated as tools and standards change.

With the robust combination of input and output formats supported by ePublisher, you can develop the content using your preferred content authoring tools, and then produce and maintain all your deliverables within a single publishing environment. You can implement a consistent look and feel across all deliverables and quickly modify and deploy that branding if and when needed. ePublisher integrates seamlessly with your content management or version control systems, so you can automatically generate and deploy the deliverables you need and reduce the time demands on your teams.

Workflow

WebWorks ePublisher Platform components provide a workflow that ensures you can deliver your content your way every time. A successful online content delivery workflow includes the following items:

- Creation and automation of consistent, reusable online content designs
- Packaging of online content designs for seamless, consistent reuse
- Application of online content designs to new and existing projects to ensure consistent content delivery and deployment

ePublisher supports this workflow by allowing ePublisher users to perform the following tasks:

- Stationery designers use ePublisher Pro to create and manage online content designs, then package the designs into Stationery for writers to use
- Writers use ePublisher Express and Stationery to create and deploy consistent online content
- ePublisher AutoMap can be configured to automatically generate and deploy online content

For more information about the WebWorks ePublisher Platform components that support this workflow, see “WebWorks ePublisher Platform Components” on page 2. For more information about the ePublisher workflow, see “Understanding the ePublisher Workflow” on page 43.

WebWorks ePublisher Platform Components

With ePublisher, you can write your content in your preferred authoring tools, then use ePublisher components to design and deliver your content. The ePublisher components allow you to design all the content output formats you need, and then automate the publication process and integrate it with your company-wide processes, such as product builds and Web site updates.

ePublisher includes the following components:

ePublisher Pro

The design tool for creating and designing Stationery. **Stationery** defines the appearance and functionality of all the output formats you need. ePublisher provides several default formats that you can use as a basis for your Stationery, and then you can customize that standard and save it as your Stationery for your deliverables produced using the other ePublisher components.

ePublisher Express

The on-demand publishing tool that transforms your content based on your Stationery and converts your source documents into the desired output formats. This component is installed on the desktop and integrates with your existing authoring tools to support the features you require, such as related topics and expand/collapse sections within your deliverable. With this component, you can quickly prepare your source documents and generate your final deliverables.

ePublisher AutoMap

The automation tool that enables you to automate the content conversion process, batch processing, and integration with content management or version control systems. This component lets you schedule conversion projects to occur at times when you are not using your computer. For example, you can schedule the conversion to occur overnight. Then, when you arrive the next morning, your transformed content is ready for you. You can also automatically generate and deploy deliverables to meet your specific needs, such as updating Web site content based on updated source documents.

Supported Input Formats

ePublisher provides a single-sourcing environment that works with several **input formats**, such as Microsoft Word, Adobe FrameMaker, and tools that support DITA authoring.

Please refer to the following website for the list of input requirements:

<http://wiki.webworks.com/Permalinks/Solutions/Input/InputRequirements>

Supported Output Formats

ePublisher lets you define your **output formats**, such as XHTML and WebWorks Help, so content developers can focus on developing quality content without worrying about tedious conversion requirements for various deliverables. You can manage your content as you want and produce deliverables in the following formats:

- HTML 3.2
- XHTML 1.0
- XML+XSL
- Wiki Markup
- WebWorks Help
- WebWorks Reverb
- Microsoft HTML Help
- Microsoft WinHelp
- Eclipse Help
- Sun JavaHelp 1.1.3 or 2.0
- Oracle Help
- PDF
- PDF - XSL-FO
- Microsoft Reader
- Palm Reader
- eBook - ePUB 2.0

How ePublisher Helps You

With ePublisher and its agile enterprise publishing capabilities, you have unparalleled design flexibility with the ability to deliver your information, regardless of input format, in multiple output formats. This solution enables both large and small organizations to implement the publishing environment that works best for them.

Streamline and Automate the Content Publishing Process

In a traditional content authoring environment, a content author produces content designed for a single output format. This environment typically has the following limitations:

- Content is often duplicated across multiple content-producing teams.
- Content is not maintained consistently across the multiple teams.
- Production is expensive with multiple tools and technologies.

Using ePublisher, you can quickly publish content from your source documents. You can develop the content using your preferred content authoring environment, such as Microsoft Word, Adobe FrameMaker, or DITA. You do not have to spend time and resources learning how to format content for each and every output format in which your content will be delivered. You can focus on the content, and then use your Stationery to quickly and easily deliver information in the multiple formats that meet the requirements for your organization.

ePublisher reduces wasted time and expenses that occur when multiple groups in your organization unknowingly produce the same information at the same time. This publishing environment allows your organization to produce content one time. This content can then be shared in varying input formats across your organization.

Produce High Quality Deliverables with Fewer Individual Dependencies

Instead of requiring team members to understand the entire process to produce content in multiple formats, team members can focus on their areas of expertise. Content developers can create informative content to add value to the products and services they document. You can also expand the skills of individual team members into important new areas, which strengthens your team as a whole.

ePublisher lets you concentrate on producing high-quality content within the authoring environment that works for you. You spend much less time on designing, implementing, and delivering multiple output formats. With ePublisher, you quickly generate complete, ready-to-deploy publications.

ePublisher also allows you to preview, proof, and review your content before you publish and deploy it. The comprehensive reports and on-demand reporting help you identify and correct any issues that may effect your online content, such as invalid styles, missing links, and compliance with Web accessibility standards. In this way, ePublisher ensures that the content you produce is of the highest quality and consistency.

Reduce Support Costs and Increase Customer Satisfaction

When you consider the many steps content goes through to get from the content developer to its final destination, publishing content can be a tedious, costly process. When an organization does not commit its attention and resources to product information, the negative results impact many aspects of the business.

Customers want to find their solution by reading as little as possible. Consistent content helps customers skim the content and find the information they need. The time content developers spend formatting content for various output formats reduces the time they have to review and improve the content. Customers can become frustrated when they spend time sorting through inconsistent and potentially inaccurate or incomplete information.

Frustrated customers quickly give up and contact customer support, often with a negative impression of the company. Increased customer support calls, especially for basic concepts and product usage, can waste valuable company resources.

ePublisher provides a workflow designed to make the publishing process as non-intrusive as possible. By allowing you to choose your preferred authoring environment and having role-focused software components, training time and production costs are reduced. The published content is consistent and delivers more value to your customers.

Quickly Update and Deliver Content More Often

If your style or online content requirements change in your organization, you need to make changes throughout your content to implement these new requirements. Extended production times increase the difficulty and complexity of these changes. ePublisher streamlines the production process to enable you to quickly implement and deploy updated content. With these streamlined processes in place, you can deliver updated content more often.

ePublisher allows you to define and deploy centralized Stationery that all projects use. When corporate standards change, such as logos and branding, you can quickly update the Stationery to incorporate the new standards. Then, content developers can import the updated Stationery into their projects and publish their updated deliverables using the new standards without changing or redesigning their source documents.

Reduce Content Management Life Cycle Costs

Due to the limitations of the traditional content model, many organizations want to move to a single-sourcing environment. **Single sourcing** allows the same content to be used multiple times and delivered in different formats. Organizations use single sourcing to eliminate duplicate content, reduce content translation and maintenance costs, improve content consistency, and minimize errors. Single sourcing also allows organizations to produce information in various formats using the same source.

Many single-sourcing solutions require all content authors to use the same authoring tool. ePublisher allows you to develop the content using your preferred content authoring environments, such as Microsoft Word, Adobe FrameMaker, or DITA. Each department can standardize on the authoring tool that is right for them, and ePublisher ties all the input formats together with a single, unified, reliable publishing process. ePublisher allows you to create integrated deliverables with source documents from multiple authoring tools.

With ePublisher, you can use your existing authoring tools and content management systems to meet organization-wide publishing needs without incurring training or software deployment expenses. The open architecture, based on industry-standard XSL, provides a flexible solution that you can customize to meet your needs without locking you into a proprietary format that could result in expensive future migration costs.

How Organizations Use ePublisher

Companies use ePublisher to meet many of their content development, delivery, and maintenance needs:

- Update Web sites automatically with thousands of HTML pages every day
- Merge content across functional boundaries and deliver consistent content on corporate intranets and extranets
- Deliver integrated, context-sensitive help systems with products
- Single-source and deliver content in online and print formats
- Deploy content for multiple platforms and devices

The following sections highlight several ways you can use ePublisher to deliver consistent, comprehensive information.

Automatically Update Content on Web Sites and Wikis

Corporate Web sites have evolved into far more than just flashy advertising with contact information for your business. In addition to attention grabbing marketing about products and features, many company Web sites feature tutorials, product demos, specific product requirements and details, and Web 2.0 resources such as Wikis and community forums where customers can share information.

With ePublisher, you can consistently update the content on your Web site to maintain the latest information and make sure it is available to your customers. You can schedule and automate content processing and deployment to deliver up to date information each and every day.

ePublisher also allows you to easily maintain corporate intranets and publish source documents from multiple organizations across your company. You can define a standard Stationery and templates for teams to use. You can then define an ePublisher job and schedule it to search a drop-box folder on a regular basis and publish the content from the source documents in that folder using your standard Stationery. This scenario ensures your team members have the latest information they need and reduces the expenses associated with publishing and maintaining this content on your intranet.

Deliver Full-Featured, Context-Sensitive Help Systems

Products need to provide comprehensive help systems that meet the needs of many potential audiences. Content design and delivery must ensure that users get the information they need when, where, and how they need it. Some products need to deliver different content to different audiences. Other products are sold by multiple companies and require distinct product branding.

ePublisher provides comprehensive support for many advanced features used in online content design and delivery, including the following elements:

- Customizable browse navigation and breadcrumbs
- Customizable table of contents and mini-TOCs
- Pop-ups and expandable/collapsible text sections
- Related topics
- Images, image maps, and multiple forms of multimedia
- Context-sensitive help topics
- Merged help systems (multi-volume help)
- Variables and conditions
- Accessibility features, such as alternate text and long descriptions
- Field-level help

Produce Single-Sourced Print and Online Optimized Content

Customers have different needs and expectations for product content. In many cases, producing information in multiple formats for users involves extensive conversion and customization work to develop and deliver the various formats. Content authors must shift their attention to manipulating and converting the content into the many different user formats, often for both print and online, instead of focusing their time and efforts on developing quality information for users.

With ePublisher, you can quickly and efficiently produce consistent, effective print and online content in multiple formats. ePublisher provides XML/XSL processing and intelligent caching to process your source documents faster than ever before.

ePublisher produces the formatting code for you, whether it is HTML, XML, RTF, Wiki Markup, or a completely custom format. You do not need to know how to tag files for various output formats. With ePublisher, content developers can produce a printable PDF manual and a comprehensive online help deliverable immediately after finishing their content using the Stationery defined separately from their content.

Features Available in Each Output Format

ePublisher supports many output formats and you can implement many powerful features in your online content. Some features are available only in certain output formats. The following table summarizes which features are available in each output format.

Feature	Simple HTML	Dynamic HTML	XML and XSL	WebWorks Help	WebWorks Reverb	Microsoft HTML Help	Microsoft WinHelp	Eclipse Help	Sun JavaHelp	Oracle Help	PDF	PDF -XSL-FO	Microsoft Reader	Palm Reader	eBook - ePUB 2.0	Wiki - Atlassian Confluence	Wiki - MediaWiki	Wiki - MoinMoin

Planning and Installing ePublisher

2

This section helps you plan your ePublisher installation and install ePublisher components. This section provides information about ePublisher components and supported configurations and ePublisher requirements. This section also explains how to download and install ePublisher components, use your **contract identifier** (Contract ID), work with license keys, upgrade ePublisher, and troubleshoot installation and licensing issues.

Licensing Considerations

Before you can generate output using ePublisher, you must have a valid Contract ID. ePublisher uses your Contract ID to automatically handle the licensing of all ePublisher components and features. Your Contract ID is valid for your ePublisher use. Your contract ID may also be valid for other users, as long as the other users were included in the contract associated with the contract ID at the time ePublisher was purchased or the other users have been added to the same contract.

Currently ePublisher is licensed based on component and input format. ePublisher components include ePublisher Express, ePublisher Pro, and ePublisher AutoMap. ePublisher input formats include Adobe FrameMaker, Microsoft Word, and DITA-XML. Based on the input format of the files you use to author content, you may have access to one or more input formats. For more information about each ePublisher component, see “WebWorks ePublisher Platform Components” on page 2. For more information about Contract IDs, see “Working with Contract IDs” on page 29.

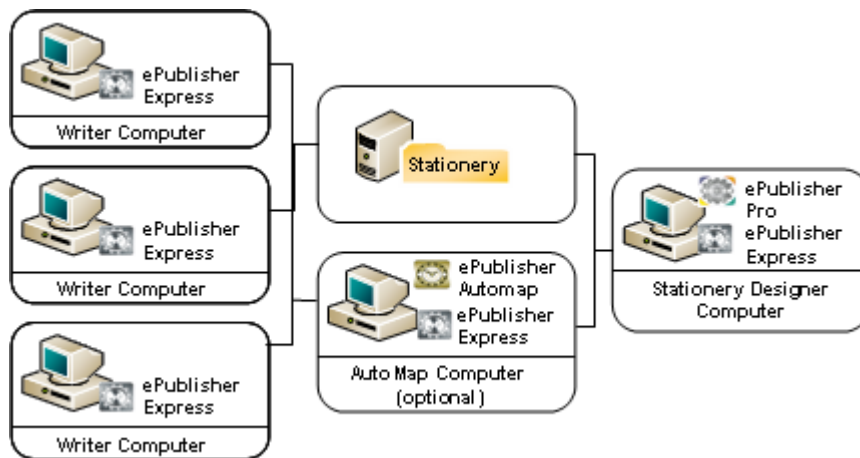

Components and Supported Configurations

Stationery designers must install ePublisher Pro and ePublisher Express on their computers. Stationery designers use ePublisher Pro to design Stationery and ePublisher Express to test Stationery.

Writers install ePublisher Express on their computers. Writers use ePublisher Express to generate output using Stationery created by a Stationery designer.

If you want to use AutoMap to automate output generation and integrate your output generation with content management or version control systems, install ePublisher AutoMap and ePublisher Express on the computer where you want to use ePublisher AutoMap. ePublisher AutoMap requires ePublisher Express. You can install ePublisher AutoMap on its own separate computer, or you can install ePublisher AutoMap on a Stationery designer or writer computer where ePublisher Express is already installed.

The following figure shows a sample ePublisher configuration.

Checklist: Installing ePublisher Components

Use the following checklist to help you install ePublisher components.

<input checked="" type="checkbox"/>	Task
<input type="checkbox"/>	1. Verify your computer meets system requirements. For more information, see "Requirements" on page 13.
<input type="checkbox"/>	2. Download the ePublisher components you want to install. For more information, see "Downloading ePublisher Installation Kits" on page 22.
<input type="checkbox"/>	3. Ensure you have a WebWorks Contract ID obtained from WebWorks staff. For more information, see "Obtaining Contract IDs" on page 30.

<input checked="" type="checkbox"/>	Task
<input type="checkbox"/>	4. Verify that the Microsoft .NET 2.0 Framework is installed on each computer where you will install ePublisher components. For more information, see “Downloading and Installing the Microsoft .NET 2.0 Framework” on page 23.
<input type="checkbox"/>	5. Enable JavaScript in Internet Explorer on each computer where you will install ePublisher components. For more information, see “Enabling JavaScript” on page 23.
<input type="checkbox"/>	6. <i>If you have installed previous versions of ePublisher components on your computer</i> , uninstall all previous ePublisher versions. For more information, see “Uninstalling ePublisher” on page 37.
<input type="checkbox"/>	7. Install ePublisher components. For more information, see “Installing ePublisher” on page 23.

Requirements

This section lists requirements for ePublisher components and input and output formats.

ePublisher Express, ePublisher Pro, and ePublisher AutoMap Requirements

The following table lists the minimum and recommended system requirements for ePublisher Express, ePublisher Pro, and ePublisher AutoMap.

Note: Memory requirements can vary with the size of the job, including number of files to generate, size of each file, number of images and tables, and more. Generally, performance increases with available memory. The following values provide good performance for an average job.

	Minimum	Recommended
Processor	Pentium IV or AMD equivalent processor	3 GHz or faster Pentium IV or AMD equivalent processor
Memory	512 MB RAM	1 GB RAM

	Minimum	Recommended
Available Disk Space	1 GB available hard disk space	2 GB available hard disk space
Operating System	Microsoft XP	<ul style="list-style-type: none"> • Microsoft Windows XP or later • ePublisher AutoMap has also been tested and verified for compatibility on Microsoft Windows Server 2003 Standard Edition and Microsoft Windows Server 2003 Enterprise Edition.
Additional Software	<ul style="list-style-type: none"> • Depending on input requirements • Microsoft .NET Framework 2.0 or later 	<ul style="list-style-type: none"> • Depending on input requirements • Microsoft .NET Framework 2.0 or later
Display	800 x 600 display screen resolution	1280 x 1024 display screen resolution (dual monitors supported)

Additional Input Format Requirements

Please refer to the following page for up-to-date input requirements:
<http://wiki.webworks.com/Permalinks/InputRequirements>

Additional Output Format Requirements

You can use ePublisher to produce output in several different formats. This section provides output format requirements for each output format ePublisher supports.

Dynamic HTML

To view Dynamic HTML, users must have a browser that supports HTML 4.0 installed. HTML 4.0 was published in late 1997, and the major browsers, such as Internet Explorer, Firefox, and Safari support HTML 4.0. For more information about the HTML version a browser supports, see the documentation for the browser. If you choose to implement online features that require JavaScript, such as popups, users may also need JavaScript enabled. Most browsers have JavaScript enabled by default. For more information about enabling JavaScript in a browser, see the documentation for the browser.

eBook - ePUB 2.0

To generate output in this format, there are no external tools required. However, you will need a compatible ePUB reader in order to view the generated output. For development purposes, it is common practice to use an ePUB reader on your computer desktop, for example, you can use Adobe Digital Editions available at:
http://www.adobe.com/products/digitaleditions/Microsoft_Windows.

Eclipse Help

To generate Eclipse Help, you must have the Java2 Platform SDK version 1.2.2 or later installed. You can download the Java2 Platform SDK for free from the Sun Microsystems Web site at <http://java.sun.com/javase/index.jsp>.

If you are using ePublisher to generate Eclipse Help, ePublisher includes a viewer that you can use on the computer where you installed ePublisher to view the Eclipse Help you generated using ePublisher.

To view Eclipse Help when you include Eclipse Help with an application, users must have the Eclipse integrated development environment (IDE) installed. Typically, application developers configure their applications to install the Eclipse IDE with the Eclipse Help content to ensure users can view the Eclipse Help while using the application. To view Eclipse Help, users must also have Microsoft Internet Explorer 6.0 or later or a Mozilla-based browser 1.7 or later installed.

Microsoft HTML Help 1.x

To generate Microsoft HTML Help, you must have Microsoft HTML Help Workshop 1.x installed. If you do not have Microsoft HTML Help Workshop installed, ePublisher will ask you if you want to install Microsoft HTML Help Workshop during the ePublisher installation process. You can also download the Microsoft HTML Help Workshop for free from the Microsoft Developer Network Web site at <http://msdn.microsoft.com/en-us/library/ms669985.aspx>.

To view Microsoft HTML Help, users must have the Microsoft HTML Help viewer installed. The Microsoft HTML Help viewer is installed with most Windows operating systems in use today. Users must also have Internet Explorer 4.0 or later installed. Microsoft HTML Help does not require that users use Internet Explorer as their default browser. Microsoft HTML Help must be installed and viewed on a local computer.

Microsoft Reader

To view Microsoft Reader files, users must have Microsoft Reader installed. You can download Microsoft Reader for free from the Microsoft Web site at <http://www.microsoft.com/reader/downloads/default.asp>.

Microsoft WinHelp

To view Microsoft WinHelp files, users must have the Windows Help viewer (`winhlp32.exe`) installed. The Windows Help viewer has been included with Microsoft Windows versions starting with the Microsoft Windows 3.1 operating system. However, beginning with the release of Windows Vista, the Windows Help viewer no longer ships as a feature of Windows. Users who want to view Microsoft WinHelp on computers running Windows Vista must download and install the Windows Help viewer from the Microsoft Download Center at <http://www.microsoft.com/downloads/search.aspx?displaylang=en>.

Oracle Help

To generate Oracle Help, you must have the Java2 Platform SDK version 1.2.2 or later installed on your computer. You can download the Java2 Platform SDK for free from the Sun Microsystems Web site at <http://java.sun.com/javase/index.jsp>. The Java 2 Platform is also known as the Java Platform, Standard Edition (Java SE).

To view Oracle Help, users must have the Java Runtime Environment (JRE) installed on their computer. Typically application developers configure their applications to install the JRE with the Oracle Help content to ensure users can view the Oracle Help while using the application. Oracle Help components must be installed and viewed on the local computer.

Palm Reader

To generate Palm Reader files, you must have DropBook installed. DropBook is a Palm Reader utility that ePublisher uses to convert generated output into a single `.pdb` file required by Palm Reader software. You can download the DropBook utility for free from the eBook Reader Web site at http://www.ereader.com/ereader/software/product/15099_dropbook_win.htm.

To view Palm Reader files, users must have eReader software installed. You can download the eReader software on the eBook Reader Web site at <http://www.ereader.com/ereader/software/browse.htm>.

PDF

To view PDF files, users must have Adobe Reader installed. You can download Adobe Reader for free from the Adobe Web Site at http://www.adobe.com/products/acrobat/readstep2_allversions.html.

Customers may encounter issues with font embedding and Windows 7. Please refer to the following resources to address this issue:

<http://wiki.webworks.com/Permalinks/Solutions/Output/PDF/ProblemsInWindows7>
<http://wiki.webworks.com/Permalinks/Solutions/Output/PDF/IssuesWithTrueTypeFonts>

PDF -XSL-FO

To generate PDF - XSL-FO files, you must have the Java2 Platform SDK version 1.2.2 or later installed. You can download the Java2 Platform SDK for free from the Sun Microsystems Web site at <http://java.sun.com/javase/index.jsp>.

Simple HTML

To view simple HTML, users must have a browser that supports HTML 3.2 or later. HTML 3.2 was published in early 1997, and the major browsers, such as Internet Explorer, Firefox, and Safari support HTML 3.2. For more information about the HTML version a browser supports, see the documentation for the browser.

Sun JavaHelp 1.1.2 and 2.0

To generate Sun JavaHelp 1.1.2 or 2.0, you must have the Java2 Platform SDK version 1.2.2 or later installed on your computer. You can download the Java2 Platform SDK for free from the Sun Microsystems Web site at <http://java.sun.com/javase/index.jsp>. The Java 2 Platform is also known as the Java Platform, Standard Edition (Java SE).

To view Sun JavaHelp, users must have the Java Runtime Environment (JRE) installed on their computer. Typically, application developers configure their applications to install the JRE with the Sun JavaHelp content to ensure users can view the Sun JavaHelp while using the application. Sun JavaHelp components must be installed and viewed on the local computer.

WebWorks Help 5.0

To view WebWorks Help, users must have JavaScript enabled in the browser. If JavaScript is not enabled, then the help system does not display in its entirety. For more information about determining whether JavaScript is enabled in your browser, see your browser options. For more information about enabling JavaScript in Internet Explorer, refer to “Enabling JavaScript” on page 23.

WebWorks Help has been tested on the following platforms:

- Internet Explorer
- Mozilla Firefox
- Netscape
- Safari
- Google Chrome
- Opera

Please refer to the WebWorks wiki for an up-to-date list of supported browsers:
<http://wiki.webworks.com/Permalinks/BrowserSupport>

WebWorks Reverb

To properly view your WebWorks Reverb output, you must deploy the output to a system that is running a web server and then access the content via an http or https url. This means that in order to see the proper function of your output, you must deploy it to a location that is served by a web server. If you do not have a web server, you can configure IIS on Windows. For more information, consult the following [resource](#). In addition, if you have enabled Google Search, or Google Analytics, or Google Translate then your files must be deployed on a public facing web server to enable these Google services.

WebWorks Reverb has been designed to perform gracefully on most any browser and browsing device. In cases where the screen resolution of the viewing device is not wide enough, the table of contents will not automatically display on the left-hand side of the screen. In this scenario, users will have to select the table of contents toolbar icon in order to display the table of contents, this is by design and allows your users to achieve maximum functionality no matter what device they may be using.

In rare cases where users have javascript disabled on their browser, the content will still be displayed, however the layout may be sub-optimal and all navigation icons will not be displayed.

WebWorks Reverb has been tested on the following platforms:

- Internet Explorer
- Mozilla Firefox
- Safari
- Google Chrome

Please refer to the WebWorks wiki for an up-to-date list of supported browsers:
<http://wiki.webworks.com/Permalinks/BrowserSupport>

Wiki - Confluence

To view Confluence Wiki output, you must deploy the output to a server computer where Confluence 2.10.2 or later is installed. You may find it helpful to set up a staging Confluence server computer if you generate Confluence output. A staging Confluence computer allows you to view your generated Wiki output before deploying your generated Wiki output to a production Confluence computer.

Before you deploy Confluence output, ensure the following APIs and plug-ins are installed on the Confluence Wiki:

- **Confluence Remote API**
This API is enabled by default when Confluence is installed. The Confluence Remote API works in conjunction with the Confluence XML RPC API.
- **Confluence XML RPC API**
This API should be enabled, and this API works in conjunction with the Confluence Remote API.
- **Adaptivist Content Formatting Macros plug-in**
The Adaptivist Content Formatting Macros plug-in is available at <http://confluence.atlassian.com/display/CONFEXT/Content+Formatting+Macros>. ePublisher uses this plug-in to control indents and any kind of complex table formatting such as row and column spans. This plug-in also provides support for `.css` classes.
- ***Ensure that the Confluence Compatibility Macros are disabled.*** The Confluence Compatibility Macros define tables. ***If the Confluence Compatibility Macros and the Adaptivist Content Formatting Macros are enabled at the same time***, table macro definition conflicts may result.
- The Confluence WYSIWYG editor does not preserve escaped characters if those character escapes are specified as HTML entities, such as `.`.

Note: Escape characters indicate that a character sequence is not formatting instructions for the Wiki. For example, on some Wikis, and asterisk (*) character followed by a space at the beginning of a line indicates a bullet. When the Wiki reads this markup, it converts the asterisk character and the space into a bullet. However, if you need to have an asterisk character followed by a space at the beginning of a line on your Wiki page, and not a bullet, you can use an escape character, such as `\` to display the content correctly.

When ePublisher generates output for Wikis, it automatically and appropriately escapes characters in your source documents so your content displays correctly in the generated output. However, if you deploy content with escape characters to a Confluence Wiki server and users then edit the content using the Confluence WYSIWYG editor, the WYSIWYG editor removes any escape characters used on the page to display content. To avoid this issue, disable the Confluence WYSIWYG editor on the Wiki server where you deploy your Confluence Wiki output.

- When you deploy content to a Confluence Wiki, pages are deployed based on the table of contents hierarchy. You can see this hierarchy in the Confluence Browse view.

For more information about Confluence, including installing and configuring Confluence, see the Confluence web site at www.atlassian.com/software/confluence. For more information about deploying Confluence Wiki output using ePublisher, see the *ePublisher Writer Guide*.

Wiki - MediaWiki

To view MediaWiki output, you must deploy the output to a computer where MediaWiki 1.11 or later is installed. You may find it helpful to set up a staging MediaWiki server computer if you generate MediaWiki output. A staging MediaWiki computer allows you to view your generated Wiki output before deploying your generated Wiki output to a production MediaWiki computer.

Before you deploy MediaWiki output, review the following settings on the MediaWiki:

- The user account you specify for ePublisher to use when deploying output to a MediaWiki requires Write access to the Wiki and the ability to remotely push content to the Wiki.
- ePublisher uses the MediaWiki Write API when deploying output to MediaWiki. Using the MediaWiki Write API ensures that any surge protection limits configured on the Wiki do not block ePublisher from deploying output to the Wiki. Ensure that the MediaWiki Write API is enabled before deploying output to MediaWiki. The Write API is disabled by default on MediaWiki.
- If you try to use ePublisher to deploy large page files, such as 2 MB or 3 MB page files, to your MediaWiki server, MediaWiki will display the following error if you do not have enough PHP memory allocated in MediaWiki:

```
Fatal error: Allowed memory size of nnnnnnn bytes exhausted (tried to allocate nnnnnnnn bytes)
```

Ensure you have enough PHP memory allocated in MediaWiki if you plan to use ePublisher to deploy large page files to your MediaWiki server. You can raise the PHP memory limit in the `php.ini` and `LocalSettings.php` files. For more information, see http://www.mediawiki.org/wiki/Manual:Errors_and_Symptoms.

For more information about MediaWiki, including installing and configuring MediaWiki, see the MediaWiki Web site at www.mediawiki.org. For more information about deploying MediaWiki output using ePublisher, see the *ePublisher Writer Guide*.

Wiki - MoinMoin

To view MoinMoin Wiki output, you must deploy the output to a computer where MoinMoin 1.6.4 or later is installed. You may find it helpful to set up a staging MoinMoin server computer if you generate MoinMoin output. A staging MoinMoin computer allows you to view your generated Wiki output before deploying your generated Wiki output to a production MoinMoin computer.

Before you deploy MoinMoin Wiki output, review the following settings on the MoinMoin Wiki:

- The user account you specify for ePublisher to use when deploying output to a MoinMoin Wiki requires Write access to the Wiki and the ability to remotely push content to the Wiki. Ensure the user account ePublisher uses when deploying content to the Wiki has the appropriate Write permissions on the Wiki.
- Ensure `xmlrpc` actions are enabled on the MoinMoin Wiki.
- Based on the MIME type assigned to the files you include in your generated output, you may need to add content types to the `mimetypes_embed` setting in the `wikiconfig` file on the MoinMoin Wiki. For example, if you use Scalable Vector Graphics (`.svg`) files when generating MoinMoin Wiki output, ensure that you add `image/svg+xml` to the `mimetypes_embed` setting.
- You can configure surge protection limits for requests on a MoinMoin Wiki, including the type of Write requests ePublisher can make when deploying output to the Wiki. Ensure you understand how surge protection is configured on the MoinMoin Wiki before you use ePublisher to deploy content to a MoinMoin Wiki.

Surge protection limits are typically configured to help protect the performance of the Wiki and to ensure the Wiki is available and has appropriate content for its intended users. Surge protection settings protect the Wiki from malicious users, including spammers, who may want to try and push spam or other unwanted content onto Wikis. In MoinMoin, you configure surge protection limits in the `wikiconfig` file. Verify that ePublisher can deploy content to a MoinMoin Wiki using the surge protection limits configured for the MoinMoin Wiki.

For more information about MoinMoin, including installing and configuring MoinMoin, see the MoinMoin Web site at <http://moinmo.in/>. For more information about deploying MoinMoin Wiki output using ePublisher, see the *ePublisher Writer Guide*.

Downloading ePublisher Installation Kits

ePublisher installation kits are available for download as .zip files on a secure area on the WebWorks Web site. You can obtain ePublisher installation kits through one of the following methods:

- ***If you are evaluating ePublisher***, the WebWorks customer service team will send you an email that contains a link to the location where you can download the ePublisher installation kit.
- ***If you are a new ePublisher customer***, the WebWorks customer service team will send you an email that contains a link to the location where you can download the ePublisher installation kit when you purchase ePublisher.
- ***If you are an existing ePublisher customer with an active maintenance agreement***, the WebWorks customer service team will automatically send you an email that contains a link to the location where you can download the ePublisher installation kit each time a new version of ePublisher releases. If you have a My Cases login for the WebWorks technical support Web site, you can also obtain the ePublisher installation kit in the My Cases area when you log in to the WebWorks technical support site.
- ***If you are an existing ePublisher customer without an active maintenance agreement***, contact the WebWorks account management team for more information.

The link you receive to the download location for the ePublisher installation kit is typically active for only one to two weeks. ePublisher installation kit download locations are changed often for security reasons. If you need the latest link to an ePublisher download kit, you can request a link by submitting a support request on the WebWorks Web site at <http://www.webworks.com/Support/>. WebWorks technical support will verify that you purchased an ePublisher license for the requested component and then provide a link where you can download the requested installation kit.

To download an ePublisher installation kit

1. Click the download link in the email from WebWorks.
2. On the WebWorks download page, click the link for the ePublisher component you want to install.
3. Click **Save**.
4. Browse to a location on your local computer where you want to save the installation kit, and then click **Save**.
5. Click **Close** when the download completes.
6. Browse to the location on your local computer where you saved the .zip file for the ePublisher component.

7. Extract the contents of the .zip file to a folder on your local computer.

Note: Each installation kit contains a `setup.exe` file and an `.msi` file. Ensure you extract the `setup.exe` file and the `.msi` file for the ePublisher component into the same folder when you extract the contents of the .zip file. The `setup.exe` file registers the setup program as needed with the operating system and then runs the `.msi` file.

Downloading and Installing the Microsoft .NET 2.0 Framework

ePublisher components require the Microsoft .NET 2.0 Framework. To see if the Microsoft .NET 2.0 Framework is already installed on your computer, in Control Panel, open Add or Remove Programs and see if the Microsoft .NET 2.0 Framework is listed.

If you do not have the Microsoft .NET 2.0 Framework installed, you can download the Framework for free from the Microsoft .NET Framework Developer Center at <http://msdn.microsoft.com/netframework/downloads>.

After you download the latest version for the Microsoft .NET 2.0 Framework, install the framework on each computer where you will install ePublisher components. Follow the instructions provided in the Microsoft .NET 2.0 Framework installation kit to install the framework.

Enabling JavaScript

To use ePublisher, you must enable JavaScript in Microsoft Internet Explorer.

To enable JavaScript in Internet Explorer

1. Open Microsoft Internet Explorer.
2. On the **Tools** menu, click **Internet Options**.
3. On the Security tab, click **Custom Level**.
4. Under **Active Scripting**, click **Enable**.

Installing ePublisher

This section explains how to install ePublisher components. Read this section before you install ePublisher components.

Installation Order for ePublisher Components

Ensure you install ePublisher components in the correct order. Review the following installation options before you install ePublisher components:

- ***If you want to generate output using Stationery created by a Stationery designer,*** install only ePublisher Express on the computer.
- ***If you want to design Stationery and generate output,*** install ePublisher Express and ePublisher Pro on the computer.

Note: ePublisher Pro requires ePublisher Express. Ensure you install ePublisher Express on the computer before you install ePublisher Pro.

- ***If you want to schedule and automate output generation,*** install ePublisher Express and ePublisher AutoMap on the computer where you want to use ePublisher AutoMap.

ePublisher AutoMap requires ePublisher Express. Ensure you install ePublisher Express on the computer before you install ePublisher AutoMap. You can install ePublisher AutoMap using one of the following configurations:

- On its own separate computer where ePublisher Express is already installed
- On a Stationery design computer where ePublisher Express and ePublisher Pro are already installed
- On a writer computer where ePublisher Express is already installed

Installing ePublisher Components

This section provides instructions for installing ePublisher components, including ePublisher Express, ePublisher Pro, and ePublisher AutoMap.

Note: You must install ePublisher Express first. Then, you can install ePublisher Pro and ePublisher AutoMap. Both ePublisher Pro and ePublisher AutoMap require ePublisher Express.

If you are upgrading from a previous version of ePublisher, review the upgrade instructions. For more information, see “Upgrading from Previous Versions” on page 32.

To install ePublisher components

1. Log on as a user using a user account that is a member of the Administrators group on the local computer.
2. Close all instances of Microsoft Office applications running on the local computer, including instances of Microsoft Word and Microsoft Outlook. Close all instances of Adobe FrameMaker running on the computer.

3. Run the `setup.exe` file in the installation package for the ePublisher component you want to install.
4. Review the welcome message, and then click **Next**.
5. Review the license agreement. If you agree to the terms of the agreement, click **I Agree**, and then click **Next**.
6. Select the application shortcuts you want to create, and then click **Next**.
7. *If you are installing ePublisher Express*, specify whether you want to allow ePublisher Express users to modify target settings, condition settings, variable values, and cross-reference definitions, and then click **Next**.

Note: *If you are evaluating ePublisher Express*, ensure you select this check box. You will modify target settings as you explore ePublisher during your evaluation. For more information, see “Customizing Exploring ePublisher Output” on page 68.

- *If you select this check box*, ePublisher Express users can modify target settings, condition settings, variable values, and cross-reference definitions used to generate output. This option gives users more control over their ePublisher output, but users can produce output that differs from the standards defined in Stationery.
- *If you do not select this check box*, ePublisher Express users cannot modify target settings, condition settings, variable values, and cross-reference definitions. Projects use the target settings, condition settings, variable values, and cross-reference definitions defined in the Stationery.

You can enable permissions to modify target settings, conditions settings, variable values, and cross-definitions later if needed. For more information, see “Enabling Target Setting Permissions After Installing ePublisher Express” on page 28.

8. Specify the location of the installation directory, and then click **Next**. The default installation directory is `C:\Program Files\WebWorks`.
9. Click **Next** to confirm your selections and to begin installing the ePublisher component.

10. In the WebWorks Licensing Info window, complete the following steps:
 - a. Enter your Contract ID. If you previously installed ePublisher on the computer using a valid Contract ID, ePublisher will automatically detect the Contract ID and display your Contract ID information. For more information about contract IDs and obtaining a Contract ID, see “Working with Contract IDs” on page 29 “Obtaining Contract IDs” on page 30.
 - b. Enter your email address. If you have an email address that you use as your WebWorks support login, enter that email address.
 - c. Enter the name of your computer.
 - d. Click **Confirm**.
11. *If the installer displays the **HTML Help Workshop 1.3 Setup window**, you can install Microsoft HTML Help Workshop 1.3 as part of your ePublisher installation. Install Microsoft HTML Help Workshop if you plan to generate Microsoft HTML Help output.*
 - *If you want to install **Microsoft HTML Help Workshop 1.3**, click **Yes**, and then follow the instructions to install Microsoft HTML Help Workshop.*
 - *If you **do not** want to install **Microsoft HTML Help Workshop 1.3**, click **No**.*
12. Click **Close** when the installation completes. ePublisher also opens a new browser window and displays a page on the www.webworks.com web site when the installation completes.
13. Restart your computer to update and register all configuration files.

14. ***If you installed ePublisher on Windows Vista and you plan to use ePublisher with Adobe FrameMaker***, due to an issue with the FrameMaker Developers Kit (FDK), after you install ePublisher you must run ePublisher Express as an Administrator at least once.

When you run ePublisher Express as an Administrator, you must open or scan an Adobe FrameMaker source document within ePublisher to register the FDK with Windows Vista as a trusted application.

Run as an Administrator and register the FDK by completing the following steps:

- a. ***If you specified that you wanted ePublisher to create a desktop shortcut when you installed ePublisher***, on your desktop, right-click the ePublisher shortcut.
- b. ***If you did not specify that you wanted ePublisher to create a desktop shortcut when you installed ePublisher***, browse to the following location, and then right-click the appropriate .exe file
 - Program Files\WebWorks\ePublisher Express\WebWorks.ePublisherExpress.exe
 - Program Files\WebWorks\ePublisher Pro\WebWorks.ePublisherPro.exe
- c. Click **Run as administrator**.
- d. Click **Allow** to confirm that you trust the application. The ePublisher component you selected opens.
- e. Open an existing project that contains an Adobe FrameMaker source document or create a new project that contains an Adobe FrameMaker source document.
- f. In Document Manager, select an Adobe FrameMaker source document.
- g. On the **Project** menu, click **Scan Selected** to register the FDK with Windows Vista.

Understanding Installed Sample Projects and Stationery

ePublisher Express and ePublisher Pro install sample projects and Stationery. You can use these sample projects and Stationery to see some examples of how you can use ePublisher to generate output. For more information about using these sample projects and Stationery to generate output, see “Exploring ePublisher Using Sample Source Documents, Projects, and Stationery” on page 55.

Enabling Target Setting Permissions After Installing ePublisher Express

You can customize target settings in a project only if you have target setting modification permissions. If you are using ePublisher Pro, you have target setting modification permissions. If you are using ePublisher Express, you may or may not have target setting modification permissions. When you install ePublisher Express, you must select the **Allow users to modify Target Settings and Properties** check box in order to have target setting modification permissions, including permissions to modify the target settings for the targets available in your project. If you do not select this check box during installation, you will not be able to customize target settings in projects. This check box is not selected by default as part of an ePublisher Express installation.

*If you did not select the Allow users to modify Target Settings and Properties check box when you installed ePublisher Express, only the Merge Settings and Deploy menu options display on the ePublisher Express **Target** menu.*

*If you selected the Allow users to modify Target Settings and Properties check box when you installed ePublisher Express, the Conditions, Variables, Cross Reference Rules, Merge Settings, Target Settings, and Deploy menu options all display on the ePublisher Express **Target** menu.*

If you need to enable target setting permissions once ePublisher Express has been installed, you can enable target setting permissions in ePublisher Express by modifying an ePublisher Express configuration file. Ensure you consult with your Stationery designer to verify that it is appropriate for you to enable target setting permissions in ePublisher Express before you enable target setting permissions.

To enable target setting permissions after installing ePublisher Express

1. Close the ePublisher Express user interface.
2. Browse to the location of the `WebWorks.ePublisherExpress.exe.config` file. By default, ePublisher installs this file in the following location when you install ePublisher Express:

```
Program Files\WebWorks\ePublisher
Express\WebWorks.ePublisherExpress.exe.config
```

3. Open the `WebWorks.ePublisherExpress.exe.config` file in Notepad.
4. Change the value of the `AllowModifications` key to `true`. The `AllowModifications` key entry should be similar to the entry below:

```
<add key="AllowModifications" value="true" />
```

5. On the **File** menu, click **Save**, and then close Notepad.
6. Open ePublisher Express and verify on the Target menu that the Conditions, Variables, Cross Reference Rules, and Target Settings menu options display.

For more information about installing ePublisher Express with target setting permissions, see “Installing ePublisher Components” on page 24.

Working with Contract IDs

ePublisher no longer requires you to manually enter license keys. ePublisher now uses Contract IDs to enable product functionality, which simplifies the ePublisher licensing process.

A Contract ID is a unique identifier that identifies the number of users and type of functionality enabled for your ePublisher installation. WebWorks generates an appropriate Contract ID for your ePublisher installation when you purchase ePublisher or request an evaluation copy of ePublisher. A Contract ID enables functionality based on the items and time frame specified in the purchase contract between your company and WebWorks.

If you have a valid contract ID for one version of the ePublisher product, when a new version of ePublisher releases, you can continue to use your same Contract ID when you upgrade to the new version of the product. You can also continue to use your same Contract ID if you have to uninstall and then re-install a version of ePublisher.

ePublisher licensing is flexible, and the WebWorks team can work with you ensure that you have the licensing that is right for you. Contact WebWorks Sales at sales@webworks.com or WebWorks Customer Service at customerservice@webworks.com to discuss any special licensing needs you may have.

Viewing Licensing and Contract ID Information

You can view licensing information in the License Information window in ePublisher. ePublisher uses adapter license keys, or activation codes, to enable ePublisher functionality. Adapter licensing information is specified in your Contract ID. ePublisher uses an Internet connection to connect to the ePublisher licensing server and periodically retrieve and update adapter activation codes as needed based on your Contract ID.

Note: If you need to install ePublisher in an environment without Internet connectivity, WebWorks can provide Contract IDs that support this environment. For more information, see “Managing Licensing in Environments without Internet Connectivity” on page 31.

ePublisher licenses, or activation codes, do not display in the ePublisher user interface, but you can view the adapters for which you are licensed and your Contract ID number in the ePublisher user interface.

To view ePublisher licensing and Contract ID information

1. On the **Help** menu, click **License Keys**. ePublisher displays the input formats for which the component is licensed in the License Information window.
2. *If you want to view your Contract ID number*, click **Info**.

Obtaining Contract IDs

ePublisher now uses Contract IDs instead of license keys to enable ePublisher functionality.

If you are evaluating ePublisher, the WebWorks customer service team will send you an email that contains a Contract ID you can use when you install an evaluation copy of ePublisher. If you have not received an evaluation Contract ID or are having problems with your evaluation license, send an email to customerservice@webworks.com.

If you are a new ePublisher customer, the WebWorks customer service team will send you an email that contains your Contract ID when you purchase ePublisher. If you have not received a Contract ID or are having problems with your licensing, send an email to customerservice@webworks.com.

If you are an existing ePublisher customer with an active maintenance agreement, the WebWorks customer service team will automatically send you an email that contains a link to the location where you can download the ePublisher installation kit. ePublisher will automatically detect and use your existing Contract ID each time you install a new version of the ePublisher product. If you have not received a Contract ID or are having problems with licensing, send an email to customerservice@webworks.com or submit a support request.

If you are an existing ePublisher customer without an active maintenance agreement, contact the WebWorks account management team for more information about obtaining your Contract ID by sending an email to sales@webworks.com.

For more information about Contract IDs, see “Working with Contract IDs” on page 29 and “Entering Contract IDs” on page 30.

Entering Contract IDs

ePublisher now uses Contract IDs instead of license keys to enable ePublisher functionality. You must enter your Contract ID, email address, and computer name before you can use ePublisher components. The Contract ID enables the ePublisher product components and ePublisher input formats for which you are licensed. For more information about Contract IDs, see “Working with Contract IDs” on page 29.

To enter a Contract ID

1. On the **Help** menu, click **License Keys**. ePublisher displays the input formats for which the component is licensed in the License Information window.
2. Click **Update**.
3. In the **Contract** field, enter your Contract ID.
4. In the **Email** field, enter your email address. If you have an email address that you use as your WebWorks support login, enter that email address.
5. In the **Computer** field, enter the name of the computer where you are installing ePublisher.
6. Click **Confirm**.

Managing Licensing in Environments without Internet Connectivity

ePublisher uses an Internet connection to connect to the ePublisher licensing server and retrieve or update adapter activation codes as needed based on your Contract ID. If you need to install ePublisher in a restricted environment where ePublisher computers do not have Internet access, contact WebWorks Sales at sales@webworks.com or WebWorks Customer Service at customerservice@webworks.com to request a non-network Contract ID. The ePublisher licensing model is flexible, and WebWorks can work with you to provide non-network Contract IDs or other licensing solutions appropriate for your environment.

Updating Licensing

ePublisher automatically contacts the ePublisher licensing server as needed to obtain updated activation codes. ePublisher communicates with the ePublisher licensing server using an Internet connection. ePublisher obtains updated activation codes as appropriate based on the licensing specified in your Contract ID.

Note: If your ePublisher is installed in an environment without Internet connectivity, WebWorks can provide Contract IDs that support this environment. For more information, see “Managing Licensing in Environments without Internet Connectivity” on page 31

Typically, you will not need to request updated activation codes, as ePublisher obtains updated codes for your automatically. However, you can manually request updated activations codes in the ePublisher interface. For example, you may want to manually request updated activation codes if you know that the computer where you installed ePublisher will not have Internet access for a long period of time. When you request updated activations codes in the ePublisher interface, ePublisher immediately establishes an Internet connection to the ePublisher licensing server and automatically obtains updated activation codes for the ePublisher adapters for which you are licensed.

To update ePublisher licensing

1. On the **Help** menu, click **License Keys**. ePublisher displays the input formats for which the component is licensed in the License Information window.
2. Click **Update**. ePublisher retrieves updated activation codes from the ePublisher licensing server.

Deactivating Licensing

You can deactivate ePublisher licensing in the ePublisher user interface. Deactivating licensing for the current ePublisher installation allows you to install ePublisher on a different computer without affecting the number of available seats allowed by your contract.

Note: The terms of the ePublisher end-user license agreement (EULA) allow you to install ePublisher Express or ePublisher Pro on one office computer and on one home or travelling computer for each assigned ePublisher user seat. ePublisher AutoMap licensing terms can vary based on whether ePublisher AutoMap was purchased on a per writer or per server basis, or in conjunction with a Content Management System (CMS).

To deactivate ePublisher licensing:

1. On the **Help** menu, click **License Keys**.
2. Click **Unregister**.

Upgrading from Previous Versions

In most cases, upgrading from a previous version to a new version of ePublisher can be accomplished in just a few steps. This section explains how to prepare for an upgrade, how to upgrade a typical ePublisher installation, and how to upgrade an ePublisher implementation with advanced customizations. This section is specific to ePublisher versions 9.x and later. For more information about upgrading ePublisher, including the latest upgrade information and how to upgrade from WebWorks Publisher 2003 to the latest ePublisher version, go to http://www.webworks.com/Support/ePublisher/Version_Migration.

Preparing to Upgrade

As you prepare to upgrade your ePublisher installation, ensure you perform the following steps:

- Save your Stationery, Stationery design projects, and any projects you currently use to generate output to a secure location. **Stationery** defines the appearance and functionality of all the output formats you need. **Stationery design projects** are the ePublisher Pro projects used to create Stationery. For more information about Stationery and Stationery design projects, see the *ePublisher Design Guide*.
- ***If you implemented overrides when designing Stationery***, ensure you save the files in the `Formats` folder, any override files currently in use, and a copy of the original files from which the overrides were created to the secure location. Examples of overrides include the following items:
 - Modifications to the `Page.asp` file
 - Custom `.css` files
 - Modifications to image files
 - Any advanced overrides such as modifications to `.xsl` or `.fti` files or files in the `Formats` folder.

When the Stationery designer creates and saves Stationery, ePublisher creates the following folders:

- `StationeryName\Formats\OutputFormat`
- `StationeryName\Formats\OutputFormat.base`

where *StationeryName* is the name the Stationery designer specified for the Stationery, and *OutputFormat* is the type of output format the Stationery Designer specified for a target in the Stationery.

The `StationeryName\Formats\OutputFormat` folder contains any customizations or overrides the Stationery designer specified when designing the Stationery. ePublisher Express synchronizes with the files in the `OutputFormat` folder and uses the information about customizations and overrides contained in files in the `OutputFormat` folder to generate output.

Note: The Stationery may have one or more `OutputFormat` folders, based on the settings the Stationery designer specified.

The `StationeryName\Formats\OutputFormat.base` folder contains copies of all the files located in the `\Program Files\WebWorks\ePublisher Pro\Formats\OutputFormat` folder. These files define the default output format and transforms and are installed by default when you install ePublisher.

Stationery designers can do a compare, or **diff**, between the files located in these folders to quickly see any customizations or overrides specified for the Stationery. Stationery designers can use this information to help them reapply customizations and overrides as needed when designing a newer version of the Stationery in ePublisher Pro.

For more information about overrides, see the *ePublisher Design Guide*.

Upgrading Typical ePublisher Implementations

After you save your existing Stationery design projects, Stationery, any projects you currently use to generate output, and any copies of override files to a secure location, perform the following steps:

- On the Stationery designer computer, uninstall all existing versions of ePublisher components, such as ePublisher Express, ePublisher Pro, and ePublisher AutoMap. The **Stationery design computer** is the computer the Stationery designer uses to create and update Stationery. ePublisher Express and ePublisher Pro are installed on the Stationery design computer. Based on your configuration, ePublisher AutoMap may also be installed on the Stationery design computer.
- Install the new version of ePublisher Express and ePublisher Pro on the Stationery designer computer. Also install the new version of ePublisher AutoMap if you run ePublisher AutoMap on the Stationery designer computer.
- Open your existing Stationery design projects using the new version of ePublisher Pro.
- Generate output and verify that your output generates as expected. Make any adjustments as needed.
 - *If you have implemented typical overrides in a Stationery design project, such as overrides to `Page.asp` files, custom `.css` files, or image files*, you can continue to use your overrides to these files, and the new version of ePublisher will recognize and use these existing modifications when generating output.
 - *If you have implemented advanced overrides*, such as overrides to `.xsl` or `.fti` files, or overrides to files in the `Formats` folder, update these files in your new ePublisher installation to include your advanced overrides. For more information, see “Upgrading Implementations with Advanced Customizations” on page 36.
- Create new Stationery for each Stationery design project.
- Deploy the updated Stationery to an appropriate location.
- On each writer computer, uninstall ePublisher Express and then reinstall the new version of ePublisher Express.
- The next time writers generate output, they open their existing projects using the new version of ePublisher Express. Writers can choose to synchronize their projects immediately to obtain the latest Stationery and then generate output, or writers can continue using their existing Stationery until they are ready to move to the latest version of the Stationery.

Upgrading Implementations with Advanced Customizations

If you have implemented advanced overrides in the Stationery design, such as overrides to `.xsl` or `.fti` files, or overrides to files in the `Formats` folder, ensure you save a copy of the following items to a secure location before uninstalling a previous version of ePublisher and installing a new version:

- Overrides currently used in the Stationery design project
- A copy of the original files from which the overrides were created

If you want to continue to use your advanced customizations with the new version of ePublisher, first uninstall your previous ePublisher version and then install a new ePublisher version. Then identify and include your overrides in the new versions of the ePublisher files as appropriate by performing a three-way merge of the following items:

- A copy of the existing override file used in the Stationery design project, located in the `StationeryName\Formats\OutputFormat` folder, where `StationeryName` is the name the Stationery designer specified for the Stationery, and `OutputFormat` is the type of output format the Stationery Designer specified for a target in the Stationery.
- A copy of the original file from which the override was created, available in the `StationeryName\Formats\OutputFormat.base` folder, where `StationeryName` is the name the Stationery designer specified for the Stationery, and `OutputFormat` is the type of output format the Stationery Designer specified for a target in the Stationery.
- A copy of the new file from the new version of ePublisher

Performing a three-way merge allows you to identify the code you changed when you created the override, and also allows you to quickly and easily create the override again in the new ePublisher files. You may find tools such as Araxis Merge Pro, available at <http://www.araxis.com/merge>, or KDiff3, available at <http://kdiff3.sourceforge.net>, helpful as you compare and merge override files.

After you perform your three-way merge and update the files you want to override in the new version of ePublisher with the overrides you specified in the previous version, test your overrides by generating output using the new version of ePublisher Pro and the Stationery design project to confirm your output generates appropriately. After you verify the output generated correctly using your advanced customizations, you can create new Stationery using the Stationery design project and then deploy the updated Stationery that includes your advanced customizations to writers to use to generate output.

Uninstalling ePublisher

If you are installing an ePublisher component that is of version 2009.3 or higher and your currently installed component is version 2009.2 or higher, then your component will automatically be uninstalled for you. Otherwise, before installing a new version of an ePublisher component, you must uninstall any previous versions of the component. Uninstalling an ePublisher component removes the installation folder and registry entries for the component from the computer.

If ePublisher installed the WebWorks Transit menu for Microsoft Word on the computer, ePublisher removes the WebWorks Transit menu and WebWorks Transit registry entries when you uninstall the last ePublisher component on the computer.

To uninstall an ePublisher component

1. Close all ePublisher user interfaces.
2. Close all instances of Microsoft Office applications running on the local computer, including instances of Microsoft Word and Microsoft Outlook. Close all instances of Adobe FrameMaker running on the computer.
3. Open Control Panel.
4. Open Add or Remove Programs.
5. Select the ePublisher component you want to uninstall.
6. Click **Remove**.
7. Click **Yes** to confirm you want to remove the ePublisher component from your computer. ePublisher removes the selected ePublisher component.

Troubleshooting Installation, License Keys, and Uninstallation

This section helps you troubleshoot issues related to the following ePublisher issues:

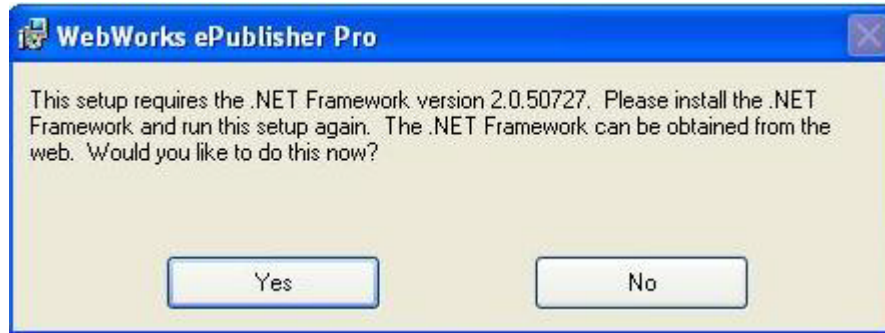

- Installing ePublisher. For more information, see “Problems Installing ePublisher” on page 38.
- Obtaining, adding, and removing Contract IDs and working with licensing. For more information, see “Problems with Contract IDs and Licensing” on page 40.
- Uninstalling ePublisher. For more information, see “Problems Uninstalling ePublisher” on page 40.

Problems Installing ePublisher

This section helps you troubleshoot issues related to installing ePublisher.

Error: Microsoft .NET Framework 2.0 Not Installed

If you are installing an ePublisher component and you do not have the Microsoft .NET Framework installed, ePublisher displays the following error message.

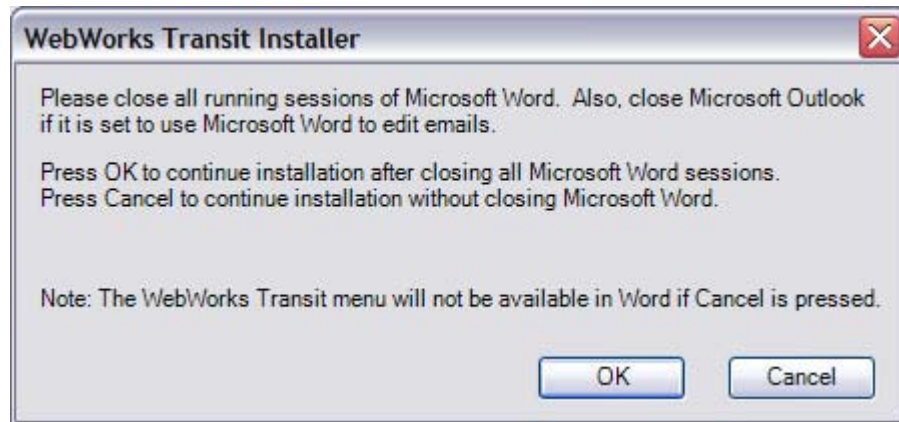

To resolve this issue

1. Click **Yes**. ePublisher redirects you to the Microsoft .NET Framework Web site.
2. Download and install the Microsoft .NET Framework Redistributable Package. You do not need to download and install the Microsoft .NET Framework Software Development Kit.

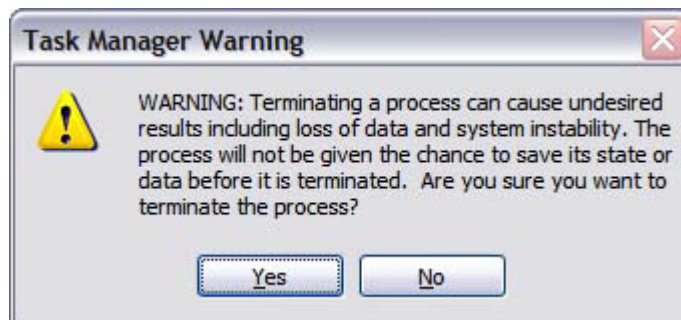

Error: Please Close all Running Sessions of Microsoft Word

If you have any Microsoft Office processes running when installing ePublisher, including instances of Microsoft Word and Microsoft Outlook, ePublisher displays the following error message.

To resolve this issue

1. Close any running instances of Microsoft Word.
2. Close Microsoft Outlook.
3. Open Task Manager.
4. Click on the **Processes** tab.
5. Search for `WINWORD.EXE`. You can click on the **Image Name** column to sort the processes alphabetically.
6. *If there is a `WINWORD.EXE` process running*, complete the following steps:
 - a. Select `WINWORD.EXE`.
 - b. Click **End Process** to close all running Word processes. Task Manager displays the following warning.

- c. Click **Yes**.
- d. Close Task Manager, and then proceed with your ePublisher installation.

7. *If there are no WINWORD.EXE processes running*, proceed with your ePublisher installation.

Problems with Contract IDs and Licensing

This section helps you troubleshoot issues related to obtaining, adding, and removing Contract IDs. For more information about Contract IDs, see “Working with Contract IDs” on page 29.

No Contract ID Received

After you purchase ePublisher components, your WebWorks customer service team will e-mail your Contract ID that enables licensing for the products you purchased. If you have not received a Contract ID, send an email to sales@webworks.com. For more information about Contract IDs, see “Working with Contract IDs” on page 29.

Error: No Valid License Key Found

You must enter a Contract ID before you can generate output. If you have not entered your Contract ID information, ePublisher displays an error stating that no valid license key was found to enable support for your content authoring tool.

If you have entered a Contract ID but still receive this error, verify you entered your Contract ID information correctly. For more information about Contract IDs, see “Working with Contract IDs” on page 29.

Other Contract ID and Licensing Problems

If you have received your Contract ID and entered your Contract ID into ePublisher but you are having problems with licensing, send an email to customerservice@webworks.com. For more information about Contract IDs, see “Working with Contract IDs” on page 29.

Note: ePublisher licensing is flexible, and the WebWorks team can work with you ensure that you have the licensing that is right for you.

Problems Uninstalling ePublisher

This section helps you troubleshoot issues related to uninstalling ePublisher.

Error: You Must Remove the Previous Version of ePublisher

If you try to install a new version of an ePublisher component before uninstalling the previous version of an ePublisher component, ePublisher displays an error message telling you need to remove the previous version of the ePublisher component before you can install the new version of the component. ePublisher should no longer display this error once you uninstall the previous version of the component.

If after you uninstall an ePublisher component, you still receive an error when you try to install a new version of the component, confirm that the component is no longer listed in the Add or Remove Programs list in Control Panel. If the component is no longer listed but you still receive the error, there may still be some registry keys from the previous installation on the computer that are preventing you from installing a new version of the ePublisher component.

To resolve this issue

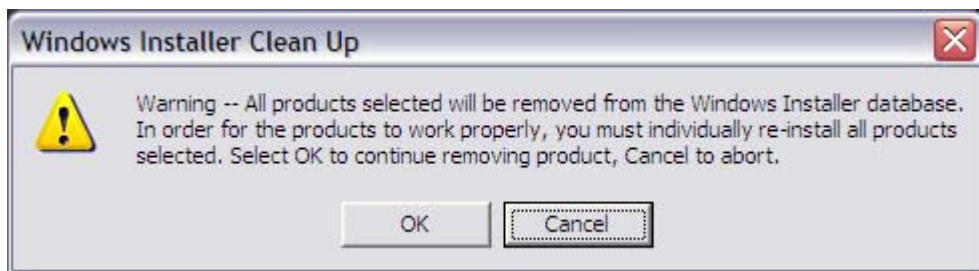

1. Log on to the WebWorks technical support site at http://www.webworks.com/Technical_Assistance/My_Cases/.
Note: You must have an active maintenance agreement in order to log on to the WebWorks technical support site.
2. On the **Find Solution** tab, in the **Search for** field, type `Problems installing or upgrading ePublisher component`, and then click **Find Solution**.
3. Open the Knowledge Base article.
4. Click the **Remove WebWorks registry file** link.
5. Download the `.zip` file.
6. Unzip the file and then run the `.reg` file.
7. Follow the instructions to remove any problematic keys. No other changes will be made to your computer.

Problems Completely Uninstalling ePublisher

If you have a problem uninstalling an ePublisher component, first ensure that no registry keys from the previous version of the component remain on your computer. For more information, see “Error: You Must Remove the Previous Version of ePublisher” on page 41. If after removing all registry key entries from the previous version you still are unable to completely uninstall ePublisher, download and install the Windows Installer Cleanup Utility. The Windows Installer Cleanup Utility allows you to completely remove ePublisher Express from your system.

To completely remove ePublisher using the Windows Installer Cleanup Utility

1. Download and install the Windows Installer Cleanup Utility. The Windows Installer Cleanup Utility is available on the Microsoft Web site at <http://support.microsoft.com/?scid=kb;en-us;290301>.
2. Open the Windows Installer Cleanup Utility.
3. Find and select the ePublisher component from the list of installed products.
4. Click **Remove**.
5. A windows displays and alerts you that ePublisher component will be deleted from the Windows Installer database. Click **OK** to remove the ePublisher component.

6. Browse to Program Files\WebWorks on your local computer.
7. Verify that the ePublisher component is no longer in the folder. If the folder still exists, delete it.

Other Errors Uninstalling ePublisher

If you have already tried to completely uninstall the ePublisher component using the Windows Installer Cleanup Utility but you are still receiving errors, submit a support request on the WebWorks Web site at http://www.webworks.com/Support/My_Cases.

Exploring ePublisher

3

This section helps you understand the ePublisher workflow, from the tasks that the Stationery designer performs, such as preparing source document templates and creating Stationery, through the tasks that writers perform, such as preparing their source documents for output generation, generating output, and validating their generated output.

This section also provides an overview of each ePublisher user interface and, through the use of sample Exploring ePublisher source documents, projects, and Stationery, helps you understand how you can quickly and easily produce online content that meets required styles and standards

Understanding the ePublisher Workflow

ePublisher allows your organization to quickly and easily produce online content that meets your organization's styles and standards. With ePublisher, you use the following workflow to quickly and easily generate online content:

- Stationery designers create new or modify existing source document templates and then use ePublisher Pro to create Stationery for writers to use to generate output. For more information, see “Stationery Designers and ePublisher Pro” on page 44.
- Writers use ePublisher Express and the Stationery created by a Stationery designer to generate and validate online content. For more information, see “Writers and ePublisher Express” on page 45.
- ePublisher AutoMap can automatically generate and deploy online content using the Stationery created by a Stationery designer and source documents created by writers. For more information, see “Automating Output Generation with ePublisher AutoMap” on page 46.

Stationery Designers and ePublisher Pro

If you are a Stationery designer, your first step when you work with ePublisher will be to identify which input formats will be used to author source documents, which types of output need to be generated, and which online features should be included in generated output. For more information, see “Supported Input Formats” on page 3, “Supported Output Formats” on page 4, and “Features Available in Each Output Format” on page 9.

After you identify your input and output formats and the features you want to include in your online content, your next step is to either create source document templates or prepare your existing source document templates for output generation. Stationery designers use source document templates to configure settings and create Stationery for writers to use when generating output. Writers use the source document templates to create content and prepare source documents for output generation. If writers already use source document templates, Stationery designers can simply prepare the existing source document templates for output generation. If writers are not currently using source document templates, the Stationery designer creates a source document template for each content authoring tool content used by the authors in the organization. Writers then use the styles and standards defined in the template to prepare their source files for output generation.

For example, if all writers use Adobe FrameMaker and Adobe FrameMaker templates when authoring content, the Stationery designer can take the existing Adobe FrameMaker templates, modify the templates as needed to support online content, and then use the existing templates to create Stationery. If writers use both Adobe FrameMaker and Microsoft Word but are not yet consistently using templates, the Stationery designer creates a new standard set of both Adobe FrameMaker and Microsoft Word templates for writers to use when authoring content. For more information about preparing source document templates for output generation, see the *ePublisher Design Guide*.

After the Stationery designer prepares source document templates for the content authoring tools writers use, the Stationery designer uses ePublisher Pro to perform the following tasks:

- Create a Stationery design project using the source document templates.
- Configure settings and options in the Stationery design project that define the look, feel, and behavior for each output target.

For example, the Stationery designer can specify if ePublisher should use the existing styles and formatting in the source documents when generating output to ensure the source documents and online content share the same look and feel. The Stationery designer can also specify that online content have a completely different look and feel than the source documents based on online output design goals and business needs.

- Create Stationery using the settings defined in the Stationery design project. The Stationery defines the style and behavior of generated output, and writers use the settings in the Stationery when they generate output from their source documents.

After the Stationery designer creates the Stationery, the Stationery designer places the ePublisher Stationery and source document template files on a shared network folder for writers to use as they author their content, prepare their source documents for output generation, and generate output.

Writers and ePublisher Express

With ePublisher, writers use their preferred content authoring tool and the source document templates provided by the Stationery designer to create content and prepare their source documents for output generation. Writers can use Microsoft Word, structured or unstructured Adobe FrameMaker, and DITA-XML content authoring tools to author content. Writers format, or tag, their source documents by applying styles and formats, and then ePublisher uses this information to generate the appropriate output based on the settings the Stationery designer specified in the Stationery. Writers do not need to worry about output design. Instead, writers can focus on creating the content users need.

When writers are ready to generate online content, writers use ePublisher Express to perform the following tasks:

- Create an ePublisher Express project based on Stationery created by a Stationery designer.
- Add the source documents they want to use to generate output to the ePublisher Express project.
- Generate output. The output writers generate adheres to the styles and standards defined by the Stationery designer in the Stationery. Writers can generate output on demand. ePublisher can also automatically generate output based on a schedule if ePublisher AutoMap is implemented.
- Deploy generated output. Writers can deploy their generation to a Web site or to a central location from which a product build can obtain the files. ePublisher can automatically deploy output if ePublisher AutoMap is implemented.
- Check the generated output into a version control system or copy the generated output to a central archive location.

Although writers typically use the Stationery provided by the Stationery designer without modification, writers can use ePublisher Express to perform some customizations of output target settings if they have target setting modification permissions. For example, writers can customize company information such as company name, phone number, and Web site information in their generated output if they have target setting modification permissions. If writers need to customize any target or project settings, they should first ensure they have appropriate target setting modification permissions. After they make any target setting customizations, they regenerate their output and verify their target setting customizations before deploying their final output. For more information about target setting permissions and modifying target settings, see the *ePublisher Writer Guide*.

Most writers prefer to use ePublisher Express to perform an initial output generation early in their project cycle. This allows writers to quickly and easily verify that they are formatting their source documents correctly and also confirm that their generated output has the appearance and features they want. After an initial verification of the generated output early in the project cycle, writers continue to add content to their source documents, then regenerate output on a periodic basis, such as once a week, as the project progresses.

If ePublisher AutoMap is implemented, ePublisher AutoMap can be configured to automatically generate output for writers on a regular schedule. For example, ePublisher AutoMap can be configured to automatically generate output for a project every night. When writers arrive at work the next day, writers can quickly and easily verify that the latest content they added to their source documents is formatted correctly and displays appropriately in their generated output. Periodic output generation using the latest version of source documents and Stationery provides the following benefits:

- Allows writers to quickly and easily confirm that they are formatting their source documents correctly and feel confident that their generated output always conforms to the standards and styles defined in their project Stationery by the Stationery designer
- Reduces the amount of time writers spend doing a quality assurance review for their generated output at the end of a project cycle
- Helps eliminate post-generation editing and processing, which save organizations time and money
- Ensures that the end of the project cycle is smooth and hassle-free

ePublisher allows writers to quickly and easily produce high-quality output according to specifications each time they generate output.

Automating Output Generation with ePublisher AutoMap

If you implement ePublisher AutoMap, you can configure ePublisher AutoMap to automate your output generation using Stationery created by a Stationery designer and source documents created by writers. For more information about ePublisher AutoMap, see the *ePublisher Design Guide*.

Exploring the ePublisher User Interfaces

The WebWorks ePublisher Platform provides the following user interfaces:

- ePublisher Express user interface, which writers use when generating output
- ePublisher Pro user interface, which Stationery designers use when creating and updating Stationery
- ePublisher AutoMap user interface, used to automate output generation and integrate the output generation process with source control systems and product build systems

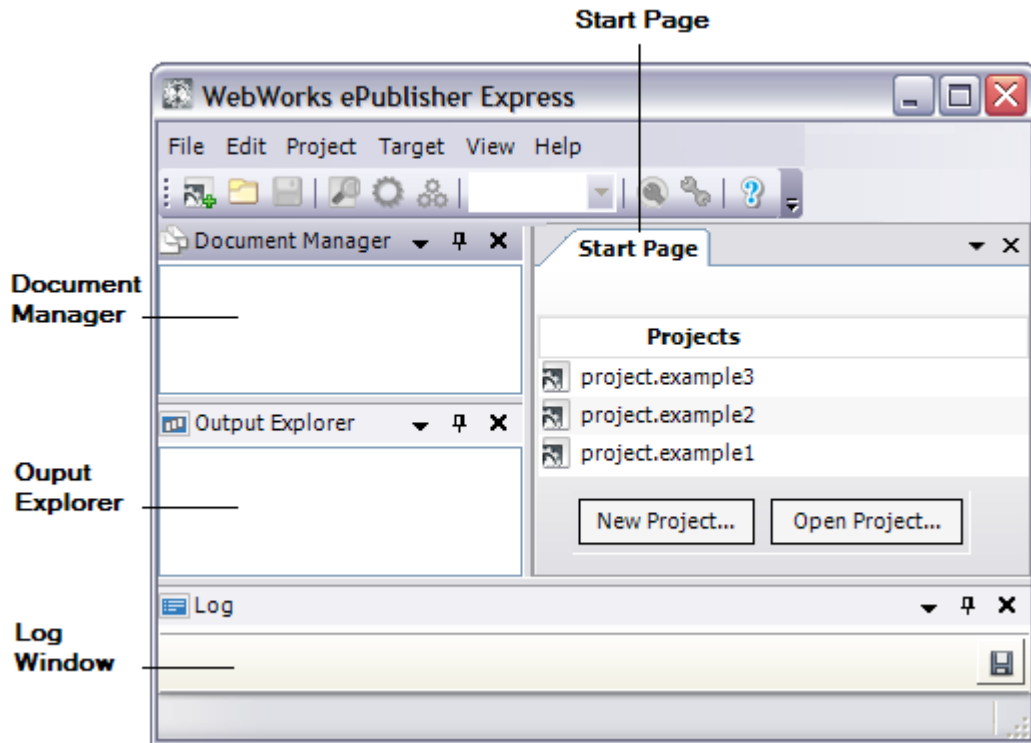

This section provides an overview of each of these ePublisher user interfaces.

Exploring the ePublisher Express User Interface

The ePublisher Express user interface includes the following windows:

- Start page. For more information, see “Understanding the Start Page” on page 49.
- Document Manager. For more information, see “Understanding Document Manager” on page 50.
- Output Explorer. For more information, see “Understanding Output Explorer” on page 50.
- Log Window. For more information, see “Understanding the Log Window” on page 52.

The following figure shows the ePublisher Express user interface.

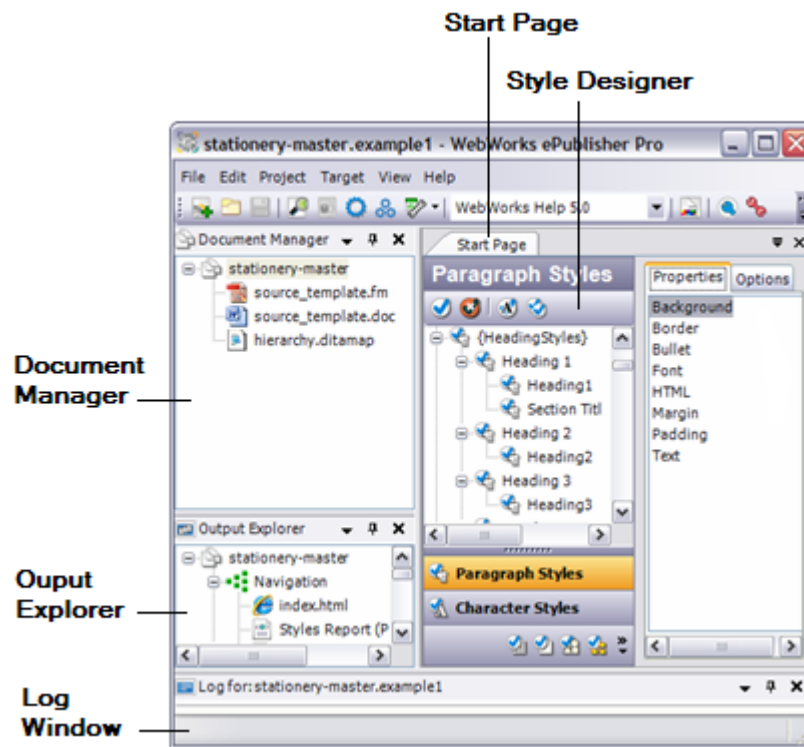

Exploring the ePublisher Pro User Interface

The ePublisher Pro user interface includes the following windows:

- Start page. For more information, see “Understanding the Start Page” on page 49.
- Document Manager. For more information, see “Understanding Document Manager” on page 50.
- Output Explorer. For more information, see “Understanding Output Explorer” on page 50.
- Log Window. For more information, see “Understanding the Log Window” on page 52.
- Style Designer. For more information, see “Understanding Style Designer” on page 52.
- Preview window. For more information, see “Understanding the Preview Window” on page 53.

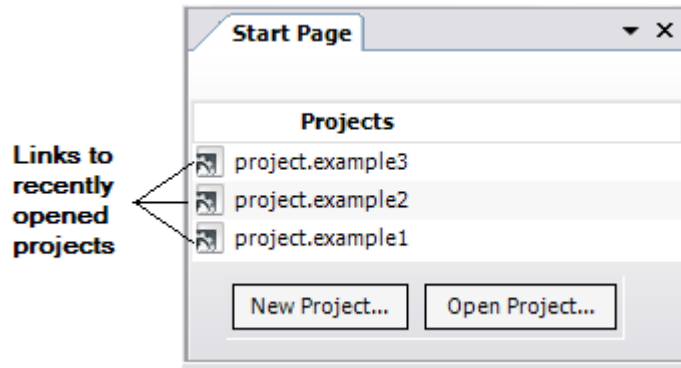

The following figure shows the ePubliher Pro user interface.

Understanding the Start Page

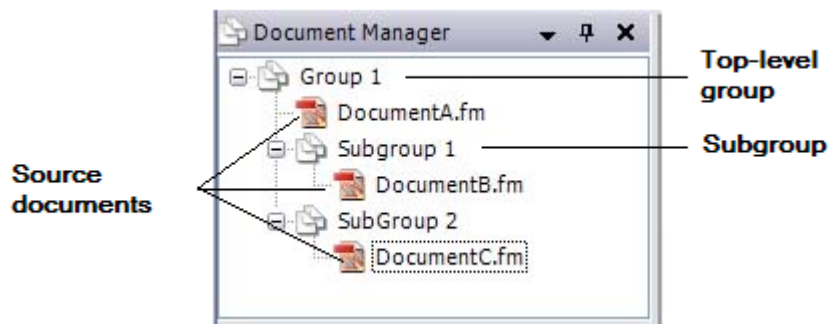

The Start page is available in both ePubliher Express and ePubliher Pro. The Start page lists the most recently opened ePubliher projects. You click on a project name on the Start page to open the associated project file. You can also specify the number of projects you want to display on the Start page. For more information about specifying the number of projects you want to display on the Start page, see “Specifying General ePubliher Preferences” on page 83.

The following figure shows the Start page.

Understanding Document Manager

Document Manager is available in both ePublisher Express and ePublisher Pro. Document Manager allows you to organize the source documents in your project. Within Document Manager, you can add, remove, and rearrange the groups and source documents in your project. For more information about working with source documents in Document Manager, see the *ePublisher Writer Guide* or the *ePublisher Design Guide*. The following figure shows Document Manager.

Understanding Output Explorer

Output Explorer is available in both ePublisher Express and ePublisher Pro. Output Explorer displays all of the files generated by ePublisher.

The following figure shows Output Explorer.

The output files displayed in the Output Explorer depend on the item you select in Document Manager. Output Explorer displays items as follows:

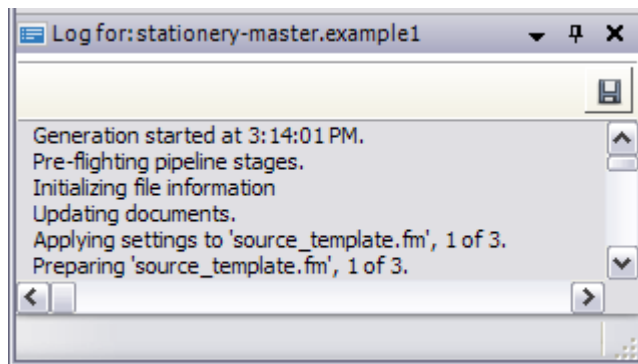

- ***If you have a source document selected in Document Manager***, ePublisher displays the source document group in Output Explorer. The source document group displayed in Output Explorer contains the Files group, which lists all of the generated topic files, the Images group, which lists all of the generated images for your output, and the Reports group, which lists Styles, Links, Accessibility, Filenames, and Topics reports.
- ***If you have a top-level group selected in Document Manager***, ePublisher displays the top-level group in Output Explorer. The top-level group displayed in Output Explorer contains the Navigation group, which lists the entry-point file for the generated output based on the active target selected in the project, and the Reports group, which lists Styles, Links, Accessibility, Filenames, and Topics reports.
- ***If you have a subgroup selected in Document Manager***, ePublisher displays the subgroup in Output Explorer. The subgroup contains the entry-point file for the generated output.

If you have more than one top-level group in Document Manager, in addition to displaying the top-level group you select in Document Manager in Output Explorer, ePublisher also displays a Merge Output group in Output Explorer. The Merge Output group displays the merged entry-point file created from each top-level group entry point file. You can use the merged entry-point file ePublisher automatically creates when you have more than one top-level group in Document Manager to create merged help systems.

For more information about merged help systems, see the *ePublisher Writer Guide* or *ePublisher Design Guide*.

Understanding the Log Window

The Log Window is available in both ePublisher Express and ePublisher Pro. The Log Window displays the log ePublisher creates when generating output. When ePublisher creates a log during output generation, you can see the status of the output generation process and any errors generated. You can also quickly and easily see which pipelines ePublisher processed, which settings ePublisher applied, and which files ePublisher parsed. For more information about viewing and working with logs, see the *ePublisher Writer Guide* or *ePublisher Design Guide*. The following figure shows the Log Window.

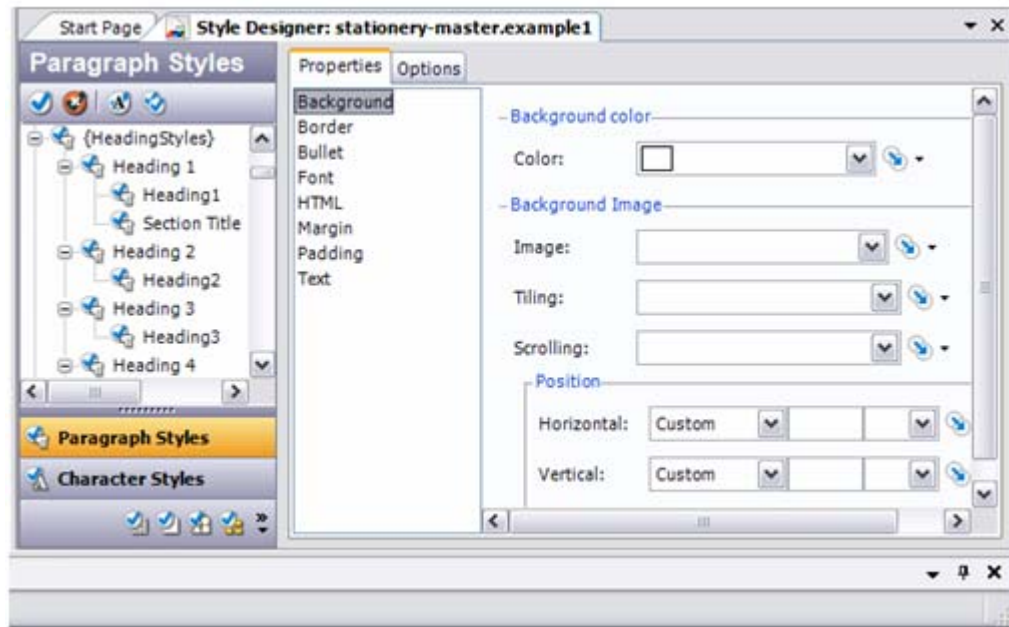

Understanding Style Designer

Style Designer is available in only ePublisher Pro. ePublisher intelligently discovers the styles in the source documents and presents a list of these styles in Style Designer. Stationery designers then define how output should be generated by specifying properties and options for each style. Stationery designers use Style Designer to define how paragraphs, characters, tables, and images display in generated output, including the color or font of a paragraph style, the style of a table border, the layout of a page, and the file format of converted images. Stationery designers can also specify other aspects of generated output, such as page layout and when topic pages are created.

ePublisher uses the styles in source documents along with the settings the Stationery designer defines in the Stationery to generate output. Using styles in source documents and Stationery settings allows precise control over the appearance and behavior of generated output.

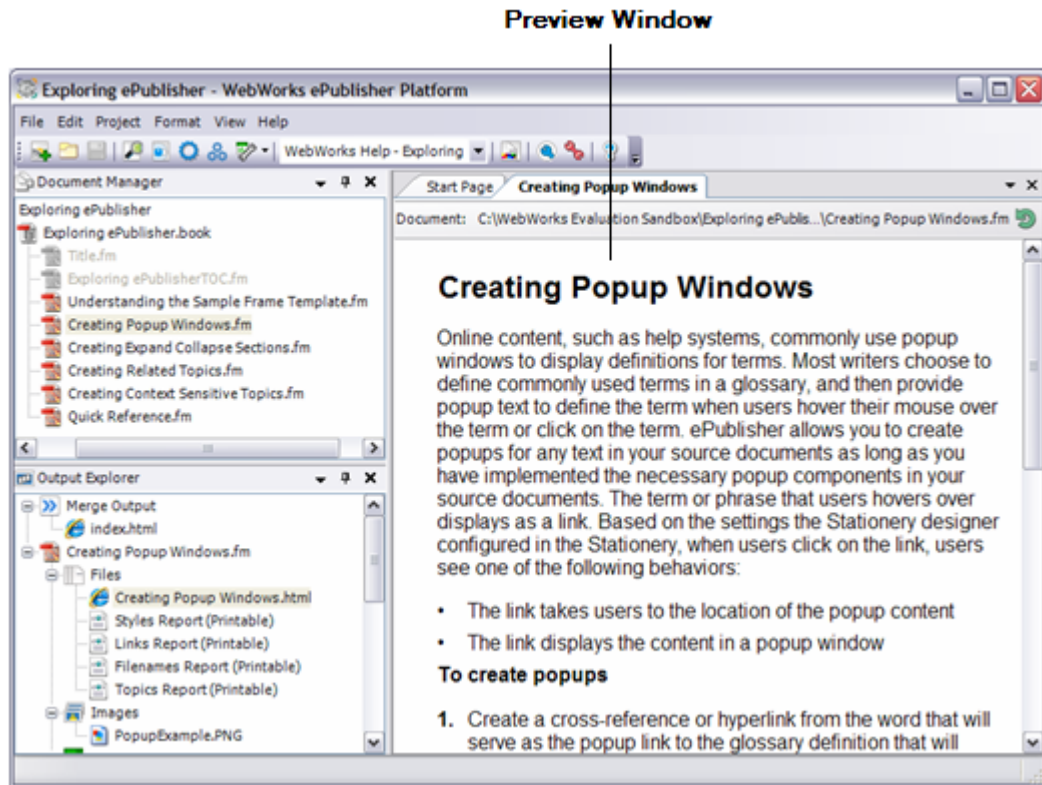

The following figure shows Style Designer.

Understanding the Preview Window

The Preview window is available in only ePubublisher Pro. When designing Stationery, Stationery designers can use the Preview window to quickly see how modifications made to styles and project settings affect the appearance of generated output. You can generate a preview of output from a source file in ePubublisher Pro when you select a source document in Document Manager. However, some online content features, such as popup windows, links, and conditions, are not displayed or active in the Preview window.

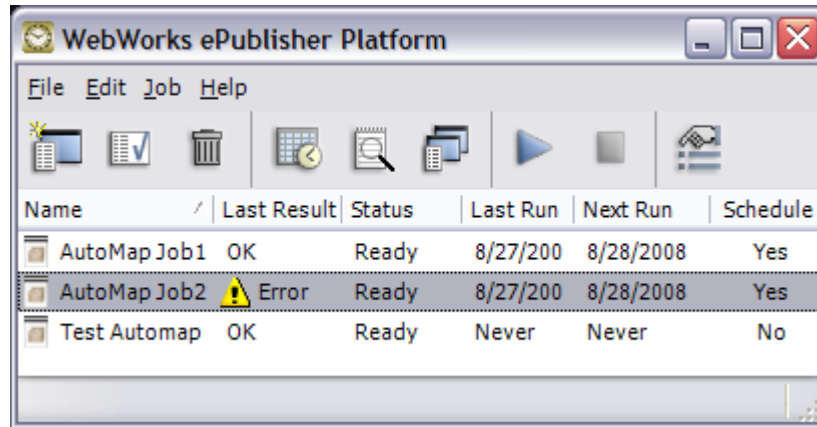

The following figure shows the Preview window.

For more information about using the preview window in ePublisher Pro when designing Stationery, see the *ePublisher Design Guide*.

Exploring the ePublisher AutoMap User Interface

The ePublisher AutoMap user interface allows you to create, edit, and schedule ePublisher AutoMap jobs. The following figure shows the ePublisher AutoMap user interface.

For more information about using ePublisher AutoMap, see the *ePublisher Design Guide*.

Exploring ePublisher Using Sample Source Documents, Projects, and Stationery

When you request an evaluation of ePublisher, you will receive information about how you can download an evaluation version of ePublisher Express, along with an evaluation Contract ID. You can request an evaluation of ePublisher by completing the form available on the WebWorks Web site at http://www.webworks.com/Downloads/Free_Trial/ or by calling Quadralay. For more information about contacting Quadralay, see “Contacting Quadralay” on page x. After you submit your request you will receive an email with instructions on how to download your ePublisher Express evaluation copy and use the evaluation Contract ID.

Once you install ePublisher Express, you can use the sample Exploring ePublisher Express project, source documents and Stationery to help you explore and understand ePublisher capabilities. ePublisher installs the sample Exploring ePublisher project and source documents in the My Documents\ePublisher Express Projects\Exp_ePub folder on the same computer. In addition, ePublisher also installs sample Stationery in the My Documents\ePublisher Stationery\Exp_Stationery folder. The Exploring ePublisher Express project, source documents and Stationery allow you to produce output in WebWorks Help, WebWorks Reverb, eBook - ePUB 2.0, PDF, Microsoft HTML Help, and Dynamic HTML using Stationery configured by a Stationery designer.

After you explore ePublisher capabilities using sample Exploring ePublisher Express project, source documents, and Stationery, you can learn more about the ePublisher workflow and Stationery design process by reviewing the *ePublisher Design Guide*. After you review the *ePublisher Design Guide*, if you would like to use ePublisher Pro to create your own Stationery as part of your ePublisher evaluation process, contact a WebWorks sales representative for more information. You can contact a WebWorks sales representative by completing the form available on the WebWorks Web site at http://www.webworks.com/assets/html/Contact_Me/ or by calling Quadralay. For more information about contacting Quadralay, see “Contacting Quadralay” on page x.

Checklist: Exploring ePublisher and Producing Output

Use the following checklist to help you use ePublisher Express and the sample Exploring ePublisher source documents and Stationery to explore ePublisher and produce output.

<input checked="" type="checkbox"/>	Task
<input type="checkbox"/>	1. Install ePublisher Express. When you install ePublisher Express, ensure you select the check box that allows you to modify target settings, condition settings, variable values, and cross-reference definitions. For more information, see “Installing ePublisher” on page 23.
<input type="checkbox"/>	2. Add the sample Exploring ePublisher source documents to the sample ePublisher Express project. For more information, see “Adding Sample Source Documents to the Exploring ePublisher Project” on page 59.
<input type="checkbox"/>	3. Review the sample Exploring ePublisher source documents to get an understanding of how the source documents are formatted to support online features in generated output. For more information, see “Reviewing Sample Exploring ePublisher Source Documents” on page 61.
<input type="checkbox"/>	4. Use the sample Exploring ePublisher Express project and the sample Exploring ePublisher source documents and Stationery to generate output. For more information, see “Generating Output Using the Exploring ePublisher Project” on page 62.
<input type="checkbox"/>	5. Review your generated output. For more information, see “Reviewing Exploring ePublisher Generated Output” on page 63.
<input type="checkbox"/>	6. Customize your Exploring ePublisher output. For more information, see “Customizing Exploring ePublisher Output” on page 68.
<input type="checkbox"/>	7. Implement online features such as popup windows, expand/collapse sections, related topics, and context-sensitive help topics using the sample Exploring ePublisher source documents and Stationery. For more information, see “Implementing Online Features Using Sample Source Documents and Stationery” on page 74.

Producing Output Using Sample Source Documents and Stationery

This section explains how you can use sample Exploring ePublisher source documents and Stationery to learn more about how ePublisher works and how you can use ePublisher to quickly and easily generate and deliver online content that conforms to the online content styles and standards specified for your organization.

Understanding the Sample Source Documents and Stationery

When writers work with ePublisher in a real-world environment, writers use their source documents and source document templates and Stationery provided by a Stationery designer to generate output.

However, this section assumes that you are using the sample Exploring ePublisher source documents and Stationery provided for you when you install ePublisher to generate output. Using the sample Exploring ePublisher source documents and Stationery allows you to see how quickly and easily writers can generate output using ePublisher Express and Stationery designed by a Stationery designer. Using the sample Exploring ePublisher source documents and Stationery also means that you do not have to create your own sample source document templates and Stationery in order to generate output.

When you explore ePublisher using the provided sample source documents and Stationery, you use sample source documents and Stationery created by a Stationery designer to generate output. These sample source documents were created using Adobe FrameMaker and Microsoft Word template files the Stationery designer created for use with the Exploring ePublisher Stationery. The Stationery designer used ePublisher Pro to create the Exploring ePublisher Stationery you received by performing the following tasks:

1. Created Adobe FrameMaker and Microsoft Word templates that specified the paragraph and character formats, styles, conditions, and marker types for writers to use when authoring content in source documents. For more information about creating Adobe FrameMaker and Microsoft Word templates, see the *ePublisher Design Guide*.
2. Created a Stationery design project. For more information about creating a Stationery design project, see the *ePublisher Design Guide*.

3. Specified WebWorks Help - Exploring ePublisher, Microsoft HTML Help - Exploring ePublisher, and Dynamic HTML - Exploring ePublisher as target output formats. For more information about specifying output formats and targets, see the *ePublisher Design Guide*.
4. Used Style Designer to perform the following tasks:
 - Defined page breaks to create a new page for each Chapter Title, Heading1, Heading2, and Heading3 style.
 - Defined the table of contents structure, or levels, for the generated output.
 - Disabled autonumbering for chapter titles.
 - Specified that cross-references display as headings with page numbers in source documents, and display as hyperlinks without page numbers in generated output.
 - Defined popup window styles by completing the following tasks:
 - Note:** Dynamic HTML does not support popup windows.
 - Defined the GlossTerm and GlossDef paragraph styles so that any content with this style applied displays in a popup window.
 - Assigned a page style for popup windows.
 - Defined the ExpandCollapse style so that any content with this style applied displays as a link, and when users click the link, the content below the link displays until the point where the writer inserts a DropDownEnd marker.
 - Defined the RelatedTopics style so that any content with this style displays as a related topic link in generated output when users click a related topics button in the generated output.
 - Defined a TopicAlias marker so that any topic that contains this marker has a unique ID that an application can use to display a context-sensitive help topic when users click on a Help button from within the application.
 - Enabled the display of company information in the bottom right of each generated output page. This allows writers to enter the appropriate company information as needed in their generated output.
 - Specified that the generated output display using the same fonts specified in the source documents. By default, ePublisher generates output using the same fonts and paragraph and character styles and formats used in the source documents. However, Stationery designers can also configure the Stationery to use a completely different look in the generated output.

- Specified that browse sequence buttons display in the generated output. By default, ePublisher creates previous and next browse sequence buttons that automatically set the browse sequence to the same page as the order of topics in the table of contents. Users can use these buttons to click through online content in the order of the table of contents.
- Configured the Stationery to ignore front matter in source documents such as title pages and table of contents pages.
- Configured a passthrough condition to use when embedding code that references multimedia files in source documents.

For more information about using Style Designer to perform these tasks, see the *ePublisher Design Guide*.

5. Saved the Stationery and performed a test output generation using the sample template files to confirm that the Stationery generates output correctly. For more information, see the *ePublisher Design Guide*.
6. Deployed the Stationery for other writers to use to generate output. For more information, see the *ePublisher Design Guide*.

Adding Sample Source Documents to the Exploring ePublisher Project

Add the sample Exploring ePublisher source documents to the sample Exploring ePublisher Express project. The sample Exploring ePublisher Express project uses the sample Exploring ePublisher Stationery configured by the Stationery designer. After you add the sample Exploring ePublisher source documents to the sample Exploring ePublisher project, you will generate output using the sample Exploring ePublisher source documents and Stationery. Generating output will help you understand how writers can use ePublisher Express and Stationery created by a Stationery designer to quickly and easily generate output from their source documents.

To add sample source documents to the Exploring ePublisher project

1. Open ePublisher Express.
2. On the **File** menu, click **Open**.
3. Browse to the `My Documents\ ePublisher Express Projects\Exp_ePub` folder.
4. Select the `Exploring ePublisher Project.wrp` file, and then click **Open**.
5. *If ePublisher displays a message asking you if you would like to synchronize the project with the Stationery*, click **OK**. ePublisher synchronizes the project with the Stationery.

6. **If you use Adobe FrameMaker to create your source documents**, complete the following steps:
 - a. In Document Manager, click **Exploring ePublisher Project**.
 - b. On the **Project** menu, click **Add Document**.
 - c. Browse to the `My Documents\ePublisher Express Projects\Exp_ePub\Source-Docs\Adobe FrameMaker` folder, select the `Exploring ePublisher.book` file, and then click **Open**. ePublisher displays the source documents you added to the project in Document Manager.
7. **If you use Microsoft Word to create your source documents**, complete the following steps:
 - a. In Document Manager, click **Exploring ePublisher Project**.
 - b. On the **Project** menu, click **Add Document**.
 - c. Browse to the `My Documents\ePublisher Express Projects\Exp_ePub\Source-Docs\Microsoft Word` folder, select the `Exploring ePublisher.doc` file, and then click **Open**. ePublisher displays the source documents you added to the project in Document Manager.
8. On the **File** menu, click **Save**.

After you add source documents to the Exploring ePublisher project, complete the following actions:

- Review the sample Exploring ePublisher source documents. For more information, see “Reviewing Sample Exploring ePublisher Source Documents” on page 61.
- Generate output. For more information, see “Generating Output Using the Exploring ePublisher Project” on page 62.
- Review the generated output. For more information, see “Reviewing Exploring ePublisher Generated Output” on page 63.
- Customize the output. For more information, see “Customizing Exploring ePublisher Output” on page 68.
- Implement online features such as popup windows, expand/collapse sections, related topics, and context-sensitive help topics. For more information, see “Implementing Online Features Using Sample Source Documents and Stationery” on page 74.

Reviewing Sample Exploring ePublisher Source Documents

Review the sample Exploring ePublisher source documents you included in the Exploring ePublisher project. You will use the sample Exploring ePublisher source documents to generate output using the Exploring ePublisher Stationery. Reviewing the sample source documents before you generate output will help you understand how writers prepare their source documents when they want to implement features such as popup windows, expand/collapse sections, related topics, and context-sensitive help topics in their generated output.

To review the sample Exploring ePublisher source documents

1. *If you added the Adobe FrameMaker Exploring ePublisher.book source document*, in Document Manager, double-click the `Exploring ePublisher.book` file. ePublisher opens the `Exploring ePublisher.book` file.
2. *If you added the Microsoft Word Exploring ePublisher.doc source document*, complete the following steps:
 - a. Double-click the `Exploring ePublisher.doc` file. ePublisher opens the `Exploring ePublisher.doc` file.
 - b. On the **Tools** menu, click **Options**.
 - c. On the **View** tab, in the **Formatting marks** area, select the **Hidden text** check box, and then click **OK**.

When writers format Microsoft Word source documents for output generation, Microsoft Word inserts some of the items writers use as hidden text. Displaying the hidden text in the Microsoft Word source documents helps you quickly and easily see online content formatting elements added to the Microsoft Word source documents.

3. Review source document contents to become familiar with the content and the styles and formatting used in the source documents. After you review the source documents, generate output.

Generating Output Using the Exploring ePublisher Project

After you have added the Exploring ePublisher source documents to your ePublisher Express project and reviewed the source documents, generate output for the following output formats using your Exploring ePublisher project:

- WebWorks Help
- WebWorks Reverb
- Microsoft HTML Help
- Dynamic HTML
- PDF
- eBook - ePUB 2.0

ePublisher provides support for a large variety of output formats, such as simple and Dynamic HTML, Sun JavaHelp, Oracle Help, Eclipse Help, PDFs, Wikis, Microsoft Reader, Palm Reader, and more. You can produce output for all of these different formats using a single set of source documents in just a few clicks.

The sample Exploring ePublisher source documents and Stationery provide examples of how online features such as popup windows, expand/collapse sections, related topics, and context-sensitive help topics display in generated output. After you generate and review the Exploring ePublisher generated output, you can customize target settings in ePublisher to further customize the look and feel of the generated output. For more information, see “Customizing Exploring ePublisher Output” on page 68.

To generate output using the Exploring ePublisher project

1. On the **Project** menu, click **Scan All Documents**.
2. Generate WebWorks Help by completing the following steps:
 - a. On the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. On the **Project** menu, click **Generate All**. ePublisher displays the Log Window and generates output.
 - c. *If you want to quickly review the generated output*, click **Yes**. You will also review the generated output in more detail in a following task. For more information, see “Reviewing Sample Exploring ePublisher Source Documents” on page 61.

3. Generate Microsoft HTML Help by completing the following steps:
 - a. On the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - b. On the **Project** menu, click **Generate All**.
 - c. *If you want to quickly review the generated output*, click **Yes**. You will also review the generated output in more detail in a following task. For more information, see “Reviewing Sample Exploring ePublisher Source Documents” on page 61.
4. Generate Dynamic HTML by completing the following steps:
 - a. On the **Project** menu, select the **Dynamic HTML - Exploring ePublisher** target next to **Active Target**.
 - b. On the **Project** menu, click **Generate All**.
 - c. *If you want to quickly review the generated output*, click **Yes**. You will also review the generated output in more detail in a following task. For more information, see “Reviewing Sample Exploring ePublisher Source Documents” on page 61.

Reviewing Exploring ePublisher Generated Output

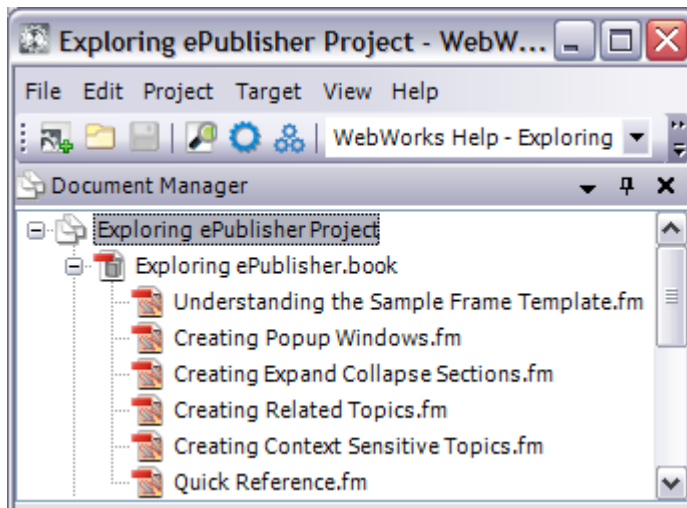

The sample Exploring ePublisher source documents and Stationery provide examples of how the following online features display in generated output:

- Popup windows
- Expand/collapse sections
- Related topics
- Context-sensitive help topics

Review the output you generated using the sample Exploring ePublisher source documents and Stationery to learn more about these items. After you review the Exploring ePublisher generated output, you can customize target settings in ePublisher to further customize the look and feel of the generated output. For more information, see “Customizing Exploring ePublisher Output” on page 68.

To review the Exploring ePublisher generated output

1. In Document Manager, select the Exploring ePublisher Project top-level group. The following figure shows the Exploring ePublisher Project top-level group selected in Document Manager.

2. *If you want to review generated output for WebWorks Help*, complete the following steps:
 - a. On the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. In Output Explorer, under **Navigation**, double-click `index.html` entry-point file to open the WebWorks Help system.

Note: By default, WebWorks Help displays a default WebWorks logo on the first page, also known as the splash page, of a WebWorks Help system. You can quickly and easily replace the default WebWorks logo used on the splash page with your own company logo, or you can choose not to use a splash page, and show the first help topic instead. For more information about customizing the splash page in WebWorks Help, see “Customizing Exploring ePublisher Output” on page 68.
3. *If you want to review generated output for Microsoft HTML Help*, complete the following steps:
 - a. On the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - b. In Document Manager, select the **Exploring ePublisher** top-level group.
 - c. In Output Explorer, under **Navigation**, double-click the `Exploring ePublisher.chm` entry-point file to open the Microsoft HTML Help system.

4. *If you want to review generated output for Dynamic HTML*, complete the following steps:
 - a. On the **Project** menu, select the **Dynamic HTML - Exploring ePublisher** target next to **Active Target**.
 - b. In Document Manager, select the **Exploring ePublisher** top-level group.
 - c. In Output Explorer, under **Navigation**, double-click the `toc.html` entry-point file to open the Dynamic HTML.
5. On the **Contents** tab, note that ePublisher created a new topic page for each section of the document with a Chapter Title, Heading1, Heading2, or Heading3 format or style applied.
6. Click one of the following topics:
 - *If you generated output using the FrameMaker source document*, click the **Sample Source Documents and Stationery (FrameMaker)** topic.
 - *If you generated output using the Word source document*, click the **Sample Source Documents and Stationery (Word)** topic.
7. Note that although a chapter number displays in front of this heading in the source document, a chapter number does not display in front of this heading in the generated output. The Stationery designer configured the Stationery not to display chapter numbers in generated output because chapter numbers are out of context in online content.
8. Click one of the following topics:
 - *If you generated output using the FrameMaker source document*, click the **Sample Source Documents and Stationery (FrameMaker) > Adding Functional Elements to Online Content (FrameMaker)** topic.
 - *If you generated output using the Word source document*, click the **Sample Source Documents and Stationery (Word) > Adding Functional Elements to Online Content (Word)** topic.
9. Note that although the cross-references display with page numbers in the source document, the Stationery designer configured the Stationery to display cross-references as hyperlinks without page numbers in the generated output. Cross-references with page numbers are appropriate in printed content, while cross-references displayed as hyperlinks without page numbers are appropriate in online content.

10. Note that each page of the generated output includes previous and next browse sequence buttons that automatically set the browse sequence to the same page as the order of topics in the table of contents. Users can use these buttons to click through online content in the order of the table of contents. The browse sequence buttons are enabled in ePublisher by default. Stationery designers can choose whether they want to display or hide the browse buttons when they define the Stationery. Stationery designers can also change the appearance of the browse sequence buttons in generated output.
11. Note that the generated output includes breadcrumbs. Breadcrumbs may be used to provide information to users about where they are in the content and to offer users a way to quickly return to previously viewed pages without using the Back button, using other navigation bars, or typing in a keyword search. Stationery designers can choose whether they want to display or hide breadcrumbs when they design Stationery. Stationery designers can also change the appearance and location of the breadcrumbs in generated output.
12. View how popup windows display in generated output by completing the following steps:

Note: Dynamic HTML does not support popup windows.

- a. *If you generated output using the FrameMaker source document*, on the **Contents** tab, click the **Popup Windows (FrameMaker) > Creating Popup Windows (FrameMaker)** topic.
- b. *If you generated output using the Word source document*, on the **Contents** tab, click the **Popup Windows (Word) > Creating Popup Windows (Word)** topic.
- c. *If you are viewing WebWorks Help output*, hover over a link to display the popup window.
- d. *If you are viewing Microsoft HTML Help output*, click the link to display the popup window.

13. View how expand/collapse sections display in generated output by completing the following steps:
- a. *If you generated output using the FrameMaker source document*, on the **Contents** tab, click the **Expand/Collapse Sections (FrameMaker) > Creating Expand/Collapse Sections (FrameMaker)** topic.
 - b. *If you generated output using the Word source document*, on the **Contents** tab, click the **Expand/Collapse Sections (Word) > Creating Expand/Collapse Sections (Word)**.
 - a. Click on the arrow following the procedure introductory text to expand and display the steps in the procedure.
 - b. Click on the arrow following the procedure introductory text again to collapse and hide the steps in the procedure.
14. View how related topics links display in generated output by completing the following steps:
- a. *If you generated output using the FrameMaker source document*, on the **Contents** tab, click the **Related Topics Links (FrameMaker) > Creating Related Topics Links (FrameMaker)** topic.
 - b. *If you generated output using the Word source document*, on the **Contents** tab, click the **Related Topics Links (Word) > Creating Related Topics Links (Word)**.
 - c. *If you are viewing related topics in WebWorks Help or Microsoft HTML Help*, click the **Related Topics** button at the bottom of the page. Related topic links display in a related topics window, and you can click a related topics link in the related topics window to display the related topic.
 - d. *If you are viewing related topics in Dynamic HTML*, click a related topics link at the bottom of the page to display the related topic.
15. See how a context-sensitive help topic ID specified in a TopicAlias marker in a source document gets added to a help system mapping file by completing the following steps:
- a. On the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - b. On the **View** menu, click **Output Directory**.
 - c. In the `Exploring ePublisher` folder, open the `Exploring ePublisher.h` mapping file in Notepad.
 - d. Verify that the `IDH_CreatingContextSensitiveTopicsFrame` or `IDH_CreatingContextSensitiveTopicsWord` topic ID is listed in the `Exploring ePublisher.h` mapping file.

Customizing Exploring ePublisher Output

After you review the Exploring ePublisher output, customize the Exploring ePublisher WebWorks Help, Microsoft HTML Help, and Dynamic HTML output. This section provides only a few examples of some of the ways you can use ePublisher to customize your output. The flexible and powerful output generation capabilities ePublisher provides allow you to specify precisely how you want your output to display, ensuring you can always deliver your online content to your exact specifications every time. You can customize the Exploring ePublisher output by performing the following actions:

- Add your company information, such as company name, phone number, fax number, and email address to the generated output.
- Configure your WebWorks Help system to display the first topic in your WebWorks Help instead of the default WebWorks Help splash page.
- Change the theme of the WebWorks Help output.
- Hide the index in your generated output.

In order to customize the Exploring ePublisher output, you must have target setting modification permissions. If you did not select the target setting permissions option when you installed ePublisher Express, you will not see the **Target Settings** menu option displayed on the **Target** menu. If you cannot see the **Target Settings** menu option because you do not have target setting modification permissions, you can quickly configure ePublisher Express to allow you to configure target settings. For more information, see “Enabling Target Setting Permissions After Installing ePublisher Express” on page 28.

To customize Exploring ePublisher output

1. Add company information to your generated output by completing the following steps:
 - a. *If you want to add company information to your WebWorks Help output*, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. *If you want to add company information to your Microsoft HTML Help output*, on the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - c. *If you want to add company information to your Dynamic HTML output*, on the **Project** menu, select the **Dynamic HTML - Exploring ePublisher** target next to **Active Target**.
 - d. On the **Target** menu, click **Target Settings**.
 - e. Under **Company Information**, in the **Company email address** field, type your company email address.

For example, type Email: *info@companyname.com*, where *info@company.com* is a valid email address for your company.
 - f. In the **Company fax number** field, type the fax number for your company.

For example, type Fax: *xxx.xxx.xxxx*, where *xxx.xxx.xxxx* is the fax number for your company.
 - g. In the **Company name** field, type your company name.
 - h. In the **Company phone number** field, type your company phone number.

For example, type Phone: *xxx.xxx.xxxx*, where *xxx.xxx.xxxx* is the phone number for your company.
 - i. In the **Company web page** field, type your company web page.

For example, type *http://www.companyname.com*, where *www.companyname.com* is the URL for your company Web site.
 - j. Click **OK**.

2. Show the first topic instead of the splash screen in your WebWorks Help output by completing the following steps:
 - a. On the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. On the **Target** menu, click **Target Settings**.
 - c. Under **WebWorks Help**, in the **Show first document instead of splash page** field, set the value to **Enabled**.
 - d. Click **OK**.

Your Stationery designer can also configure your Stationery to use a custom splash page image. For more information about customizing the splash page image, see the *ePublisher Design Guide*.

3. Change the theme of your WebWorks Help system from Lobby Blue to Architect Green by completing the following steps:
 - a. On the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. On the **Target** menu, click **Target Settings**.
 - c. Under **WebWorks Help**, in the **Theme** field, set the value to **Architect Green**.
 - d. Click **OK**.

4. Hide the index in your generated output.

By default, ePublisher creates an index using index markers inserted into source documents. If you have source documents that do not contain index entries, you can hide the index in your generated output. After you add index entries into your source documents, you can then specify that you want to display an index in your generated output in just a few clicks. The Exploring ePublisher source documents do not have index entries added, so you should hide the index in the Exploring ePublisher generated output since the index in the generated output will not contain useful information to users. Hide the index in your generated output by completing the following steps:

- a. *If you want to hide the index in your WebWorks Help output*, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - a. *If you want to hide the index in your Microsoft HTML Help output*, on the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - a. *If you want to hide the index in your Dynamic HTML output*, on the **Project** menu, select the **Dynamic HTML - Exploring ePublisher** target next to **Active Target**.
 - b. On the **Target** menu, click **Target Settings**.
 - c. Under **Index**, set the **Generate index** setting value to **Disabled**.
 - d. Click **OK**.
5. On the **Project** menu, click **Generate All**.

6. Verify your output displays the company information you specified by completing the following steps:
 - a. *If you added company information to your WebWorks Help output*, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. *If you added company information to your Microsoft HTML Help output*, on the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - c. *If you added company information to your Dynamic HTML output*, on the **Project** menu, select the **Dynamic HTML - Exploring ePublisher** target next to **Active Target**.
 - d. In Document Manager, select the **Exploring ePublisher** top-level group.
 - e. In Output Explorer, under **Navigation**, perform one of the following actions:
 - *If you added company information to your WebWorks Help output*, double-click the `index.html` entry-point file to open the WebWorks Help system.
 - *If you added company information to your Microsoft HTML Help output*, double-click the `Exploring ePublisher.chm` entry-point file to open the Microsoft HTML Help system.
 - *If you added company information to your Dynamic HTML output*, double-click the `toc.html` entry-point file to open the Microsoft HTML Help system.
 - f. Verify that the company name, phone number, fax number, and email address you specified displays in the bottom right of each topic page in the generated output. Also note that the Stationery designer can specify a different look and feel for the area that contains this information as needed based on the preferred styles and standards for your organization.

7. Verify that the first topic in your WebWorks Help output displays instead of the default WebWorks splash screen and verify that the WebWorks Help system uses the Architect Green theme instead of the Lobby Blue theme by completing the following steps:
 - a. On the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. In Document Manager, select the **Exploring ePublisher** top-level group.
 - c. In Output Explorer, under **Navigation**, double-click the `index.html` entry-point file to open the WebWorks Help generated output.
 - d. Verify that the first topic in the WebWorks Help system displays instead of the default WebWorks Help splash screen.
 - e. Verify that the color theme in the help system in the WebWorks Help system displays using the Architect Green theme instead of the default Lobby Blue theme.

8. Verify that an index no longer displays in your generated output by completing the following steps:
 - a. *If you specified you wanted to hide the index in your WebWorks Help output*, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - b. *If you specified you wanted to hide the index in your Microsoft HTML Help output*, on the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - c. *If you specified you wanted to hide the index in your Dynamic HTML output*, on the **Project** menu, select the **Dynamic HTML - Exploring ePublisher** target next to **Active Target**.
 - d. In Document Manager, select the **Exploring ePublisher** top-level group.
 - e. In Output Explorer, under **Navigation**, perform one of the following actions:
 - *If you specified you wanted to hide the index in your WebWorks Help output*, double-click the `index.html` entry-point file to open the WebWorks Help generated output.
 - *If you specified you wanted to hide the index in your Microsoft HTML Help output*, double-click the `Exploring ePublisher.chm` entry-point file to open the Microsoft HTML Help generated output.
 - *If you specified you wanted to hide the index in your Dynamic HTML output*, double-click the `toc.html` entry-point file to open the Dynamic HTML generated output.
 - f. Verify that the **Index** tab no longer displays in your generated output.

After you perform these simple customizations for your generated output, next explore how you can quickly and easily implement online features using the sample Exploring ePublisher source documents and Stationery.

Implementing Online Features Using Sample Source Documents and Stationery

You can create online features such as popup windows, expand/collapse sections, and related topics links using the sample Exploring ePublisher source documents and Stationery.

Using Sample Adobe FrameMaker Source Documents and Stationery to Implement Online Features

If you use Adobe FrameMaker to author content, you can use the sample Exploring ePublisher Adobe FrameMaker source documents and the sample Exploring ePublisher Stationery to see how you can use ePublisher to quickly and easily implement the following online features:

- Popup windows
- Expand/collapse sections
- Related topics
- Context-sensitive help topics

The following procedure provides an example of how to implement online features in Adobe FrameMaker source documents using unstructured Adobe FrameMaker 7.2. Steps for implementing online features in Adobe FrameMaker may be different in other versions of Adobe FrameMaker.

To implement online features using the sample Exploring ePublisher Adobe FrameMaker source documents and Stationery

1. Create a popup window by completing the following steps:
 - a. In Document Manager, open the `Quick Reference.fm` file.
 - b. In the Exploring ePublisher Sample Content section at the end of the `Quick Reference.fm` file, apply the `GlossTerm` paragraph format to the Popup window glossary term and apply the `GlossDef` paragraph format to the popup window glossary definition.
 - c. Insert your cursor after the period in the last sentence of the content you want to display in the popup window.
 - d. On the **Special** menu, click **Marker**.
 - e. In the **Marker Type** field, select **PopupEnd** from the drop-down list.
 - f. Click **New Marker**. Do not specify any text in the **Marker Text** field when you insert the marker.
 - g. In Document Manager, open the `Creating Popup Windows.fm` file.
 - h. In the Creating Your First Popup Window (FrameMaker) section in the `Creating Popup Windows.fm` file, highlight the term *popup window* in the following sentence:

A popup window can be used to display glossary terms and definitions.
 - i. On the **Special** menu, click **Cross Reference**.
 - j. In the **Document** field, select **Quick Reference.fm**.
 - k. In the **Paragraph Tags** field, click **GlossTerm**.
 - l. In the **Paragraphs** field, click **Popup windows**.
 - m. In the **Format** field, select **Glossary Term**.
 - n. Click **OK**.
 - o. Save your FrameMaker source document.
 - p. In ePublisher Express, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - q. On the **Project** menu, click **Generate All**.
 - r. In Document Manager, select the **Exploring ePublisher** top-level group.
 - s. In Output Explorer, under **Navigation**, double-click the `index.html` file to open your generated WebWorks Help output.
 - t. On the **Contents** tab, click **Popup Windows (FrameMaker) > Creating**

3. Create related topics links for a topic by completing the following steps:
 - a. In Document Manager, open the `Creating Related Topics.fm` file.
 - b. In the Creating Your First Related Topics Links (FrameMaker) section, apply the RelatedTopic paragraph format to the following list of cross-references at the end of the topic:
 - Creating Your First Popup Window (FrameMaker)
 - Creating Your First Expand/Collapse Section (FrameMaker)
 - c. Save the Adobe FrameMaker source document.
 - d. In ePublisher Express, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - e. On the **Project** menu, click **Generate All**.
 - f. In Document Manager, select the **Exploring ePublisher** top-level group.
 - g. In Output Explorer, under **Navigation**, double-click the `index.html` file to open your generated WebWorks Help output.
 - h. On the **Contents** tab, click **Related Topics Links (FrameMaker) > Creating Your First Related Topics Links (FrameMaker)**.
 - i. Click on the Related Topics button at the bottom of the page and verify that the list of related topics displays in the generated output.

4. Create a context-sensitive help topic by completing the following steps:
 - a. In Document Manager, open the `Creating Context Sensitive Topics.fm` file.
 - b. In the **Creating Your First Context-Sensitive Help Topics (FrameMaker)** section, insert your cursor in front of the first paragraph in the topic.
 - c. On the **Special** menu, click **Marker**.
 - d. In the **Marker Type** field, select **TopicAlias** from the drop-down list.
 - e. In the **Marker Text** field, specify the following topic ID for the topic:
`IDH_CreatingYourFirstContextSensitiveHelpTopicFrame`
 - f. Click **New Marker**.
 - g. Save the Adobe FrameMaker source document.
 - h. On the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - i. On the **Project** menu, click **Generate All**.
 - j. On the **View** menu, click **Output Directory**.
 - k. In the `Exploring ePublisher` folder, open the `Exploring ePublisher.h` mapping file in Notepad.
 - l. Verify that the `IDH_CreatingYourFirstContextSensitiveHelpTopicFrame` topic ID is listed in the `Exploring ePublisher.h` mapping file.

Using Sample Microsoft Word Source Documents and Stationery to Implement Online Features

If you use Microsoft Word to author content, you can use the sample `Exploring ePublisher` Microsoft Word source document and the sample `Exploring ePublisher Stationery` to see how you can use ePublisher to quickly and easily implement the following online features:

- Popup windows
- Expand/collapse sections
- Related topics
- Context-sensitive help topics

The following procedure provides an example of how to implement online features in Microsoft Word source documents using Microsoft Word 2003. Steps for implementing online features in Microsoft Word may be different in other versions of Microsoft Word.

To implement online features using the sample Exploring ePublisher Microsoft Word source documents and Stationery

1. Create a popup window by completing the following steps:
 - a. In Document Manager, open the `Exploring ePublisher.doc` file.
 - b. In the Exploring ePublisher Sample Content (Word) section at the end of the `Exploring ePublisher.doc` file, apply the `GlossTerm` paragraph format to the Popup window glossary term and apply the `GlossDef` paragraph format to the popup window glossary definition.
 - c. Insert your cursor in front of the Popup window term.
 - d. On the **Insert** menu, click **Bookmark**.
 - e. In the **Bookmark name** field, type `PopupWindow`, and then click **Add**.
 - f. Insert your cursor at the end of the last sentence of the popup window definition.
 - g. On the **WebWorks** menu, click **Markers**.
 - h. In the **Marker** field, select **PopupEnd**, and then click **OK**.
 - i. In the Creating Your First Popup Window (Word) section in the `Exploring ePublisher.doc` file, highlight the term *popup window* in the following sentence:

A popup window can be used to display glossary terms and definitions.
 - j. On the **Insert** menu, click **Hyperlink**.
 - k. In the **Select a place in this document** field, under Bookmarks, select **PopupWindow**, and then click **OK**.
 - l. Save your Word source document.
 - m. In ePublisher Express, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - n. On the **Project** menu, click **Generate All**.
 - o. In Document Manager, select the **Exploring ePublisher** top-level group.
 - p. In Output Explorer, under **Navigation**, double-click the `index.html` file to open your generated WebWorks Help output.
 - q. On the **Contents** tab, click **Popup Windows (Word) > Creating Your First Popup Window (Word)**.
 - r. Hover over the popup window text in the following sentence and verify that a popup window with the popup window glossary definition you specified displays correctly.

2. Create an expand/collapse section by completing the following steps:
 - a. In the **Creating Your First Expand/Collapse Section (Word)** section in the `Exploring ePublisher.doc` source document, apply the **ExpandCollapse** paragraph format to the following text:

To create your first expand/collapse section
 - b. Insert your cursor after the period in the last sentence of the procedure.
 - c. On the **WebWorks** menu, click **Markers**.
 - d. In the **Marker** field, select **DropDownEnd** from the list, and then click **OK**.
 - e. Save the Microsoft Word source document.
 - f. In ePublisher Express, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - g. On the **Project** menu, click **Generate All**.
 - h. In Document Manager, select the **Exploring ePublisher** top-level group.
 - i. In Output Explorer, under **Navigation**, double-click the `index.html` file to open your generated WebWorks Help output.
 - j. On the **Contents** tab, click **Expand/Collapse Sections (Word) > Creating Your First Expand/Collapse Section (Word)**.
 - k. Click on the arrow following the procedure introductory text to expand and display the steps in the procedure.
 - l. Click on the arrow following the procedure introductory text again to collapse and hide the steps in the procedure.

3. Create related topics links for a topic by completing the following steps:
 - a. In the Creating Your First Related Topics Links (Word) section in the Exploring ePublisher.doc source document, apply the RelatedTopic paragraph format to the following list of cross-references at the end of the topic:
 - Creating Your First Popup Window (Word)
 - Creating Your First Expand/Collapse Section (Word)
 - b. Save the Microsoft Word source document.
 - c. In ePublisher Express, on the **Project** menu, select the **WebWorks Help - Exploring ePublisher** target next to **Active Target**.
 - d. On the **Project** menu, click **Generate All**.
 - e. In Document Manager, select the **Exploring ePublisher** top-level group.
 - f. In Output Explorer, under **Navigation**, double-click the `index.html` file to open your generated WebWorks Help output.
 - g. On the **Contents** tab, click **Related Topics Links (Word) > Creating Your First Related Topics Links (Word)**.
 - h. Click on the Related Topics button at the bottom of the page and verify that the list of related topics displays in the generated output.

4. Create a context-sensitive help topic by completing the following steps:
 - a. In the **Creating Your First Context-Sensitive Help Topics** section in the `Exploring ePublisher.doc` source document, insert your cursor in front of the first paragraph in the topic.
 - b. On the **WebWorks** menu, click **Insert TopicAlias Marker**.
 - c. In the **Topic Alias** field, specify the following topic ID for the topic:
`IDH_CreatingYourFirstContextSensitiveHelpTopicWord`
 - d. Click **OK**.
 - e. Save the Microsoft Word source document.
 - f. On the **Project** menu, select the **Microsoft HTML Help - Exploring ePublisher** target next to **Active Target**.
 - g. On the **Project** menu, click **Generate All**.
 - h. On the **View** menu, click **Output Directory**.
 - i. In the `Exploring ePublisher` folder, open the `Exploring ePublisher.h` mapping file in Notepad.
 - j. Verify that the `IDH_CreatingYourFirstContextSensitiveHelpTopicWord` topic ID is listed in the `Exploring ePublisher.h` mapping file.

Exploring Additional ePublisher Capabilities

The sample `Exploring ePublisher` source documents and `Stationery` provide only a small sample of some of the many capabilities ePublisher provides.

You can view additional multimedia recordings on the WebWorks Web site that illustrate a wide range of other ePublisher capabilities, such as producing Eclipse Help, Wiki markup, PDFs, and Dynamic HTML Web site output, how you can use ePublisher to precisely customize the look and feel of your generated output to meet corporate and branding requirements, and more.

See the full list of `Exploring ePublisher` videos at:
http://www.webworks.com/Resources/Video_Library.

Customizing Your ePublisher Workspace

By default, the ePublisher user interface comes preset with certain toolbar icons and window settings. ePublisher gives you extensive control over the appearance of the user interface by allowing you to customize the display of windows and toolbars.

When you open ePublisher for the first time, Document Manager and Output Explorer are docked and the Log Window is undocked. When a window is undocked, it displays as a tab in the sidebar, and it will auto-hide unless you hover over the tab in the sidebar. When you hover over an undocked window, the window displays.

You can customize the display of windows in the user interface to suit your needs. In ePublisher, you can move Document Manager, Output Explorer, and the Log Window to different locations within the user interface or make them into floating windows. When you dock a window, it becomes stationary within the user interface and is always visible.

You can rearrange docked windows by moving the window to a new location within the user interface. For example, you can move the Output Explorer into a new window pane next to the Start page. However, the Start page cannot be moved. The Start page serves as the central point from which all the windows are arranged. To move a docked window within the user interface, click on the title bar of the window and then drag the window to a new location. To undock a window, click on the pin icon in the upper right corner of the window.

In addition to rearranging docked windows, you can add, remove, customize, or create buttons on tool bars. You can also create your own custom toolbars. By customizing your toolbars and buttons, you can create a workspace that fits your preferences and work style.

Whenever you make changes to the user interface by moving windows, changing window dock settings, or customizing toolbars, the changes take effect for each subsequent project you create or open. For example, if you dock Document Manager, Output Explorer, and the Log Window and add customized buttons to the toolbar, these settings will become the default settings for each project you open.

Specifying General ePublisher Preferences

You use the **General** tab of the Preferences window to specify ePublisher preferences, such as the number of recent projects to display on the Start page, whether to automatically scan source documents when you add them to Document Manager, and where to store user-created formats. You can also reset the user interface toolbar and window dock positions.

To specify general ePublisher preferences

1. On the **Edit** menu, click **Preferences**.
2. Specify preferences for each setting. For more information about settings and options, click **Help**.
